

Animals in Vilar de Barrio

Crows

An animal that lives in my area is the crow. Crows live temperate forests, next to trees. They are black. They have a beak. Its body is covered with black feathers. They are omnivores because they eat fruits, cereals and berries. Crows live in groups. Crows aren't endangered.

Crows are birds because they are born from a egg.

Crows are smaller than eagles, but they are darker. Crows are darker than owls. Eagles are hungrier and they eat crows' food. Owls also live longer than crows.

Genet

My favourite animal is the genet. Genets live in temperate forests. They are mammals. They are white with black spots, they have a long tail and they have bright eyes.

They eat insects, small mammals, lizards and birds. Genets lives on their own.

Cats are smaller than genets. Genets are bigger and longer than cats. Genets also live longer than cats.

The fox

Foxes live in forests. They are brown and they have got a white spot in the tail. They have got a long tail and short ears. Foxes are middle size. Foxes are mammals. They sometimes have short legs. They have got a small mouth.

There are 7 types of foxes in the world.

They are omnivores, that means that they eat everything (meat and plants) they are predators. They hunt birds, rabbits...

They aren't dangerous.

They are shorter than deers. They have bigger eyes than wildboars.

THE FERRET

Ferrets are grey or brown and they have a black tail. Ferrets live in forests or sometimes in houses. They live in Spain. The main countries where ferrets live are Spain, Australia, Brazil, New Zealand and United States.

Ferrets don't fly, they jump and walk.

They are born from their mothers' womb.

Ferrets aren't dangerous and they aren't endangered.

Ferrets are smaller than red squirrels but red squirrels have a longer tail than ferrets.

Ferrets are taller than mice.

Ferrets drink milk and they eat seeds.

The badger

The badger is black and it has white stripes in its head, it has got a very long and white tail. It is omnivore , they can weigh up to fifteen kg.

Smell and hearing are the senses they use more. They are smaller than deers. They are bigger than crows. They have long claws.

They have long teeth. They are fierce.

They are mammals because they are born from their mothers' womb.

They live in the forest.
