

Células epiteliais

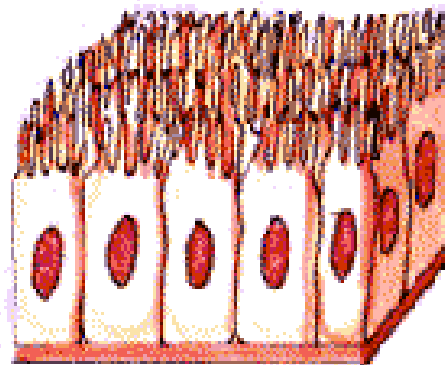

Epitelio plano

Epitelio cúbico

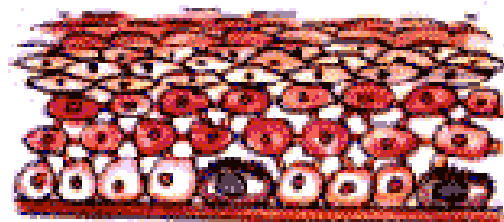

Epitelio cilíndrico simple

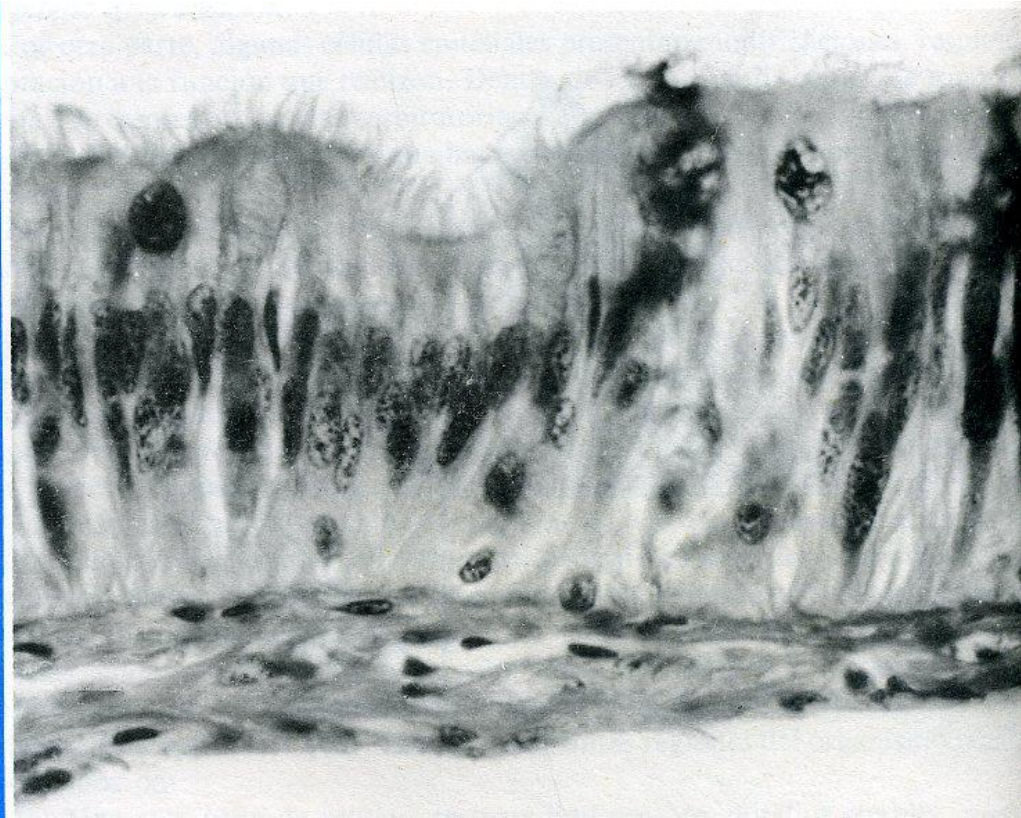

Epitelio cilíndrico ciliado

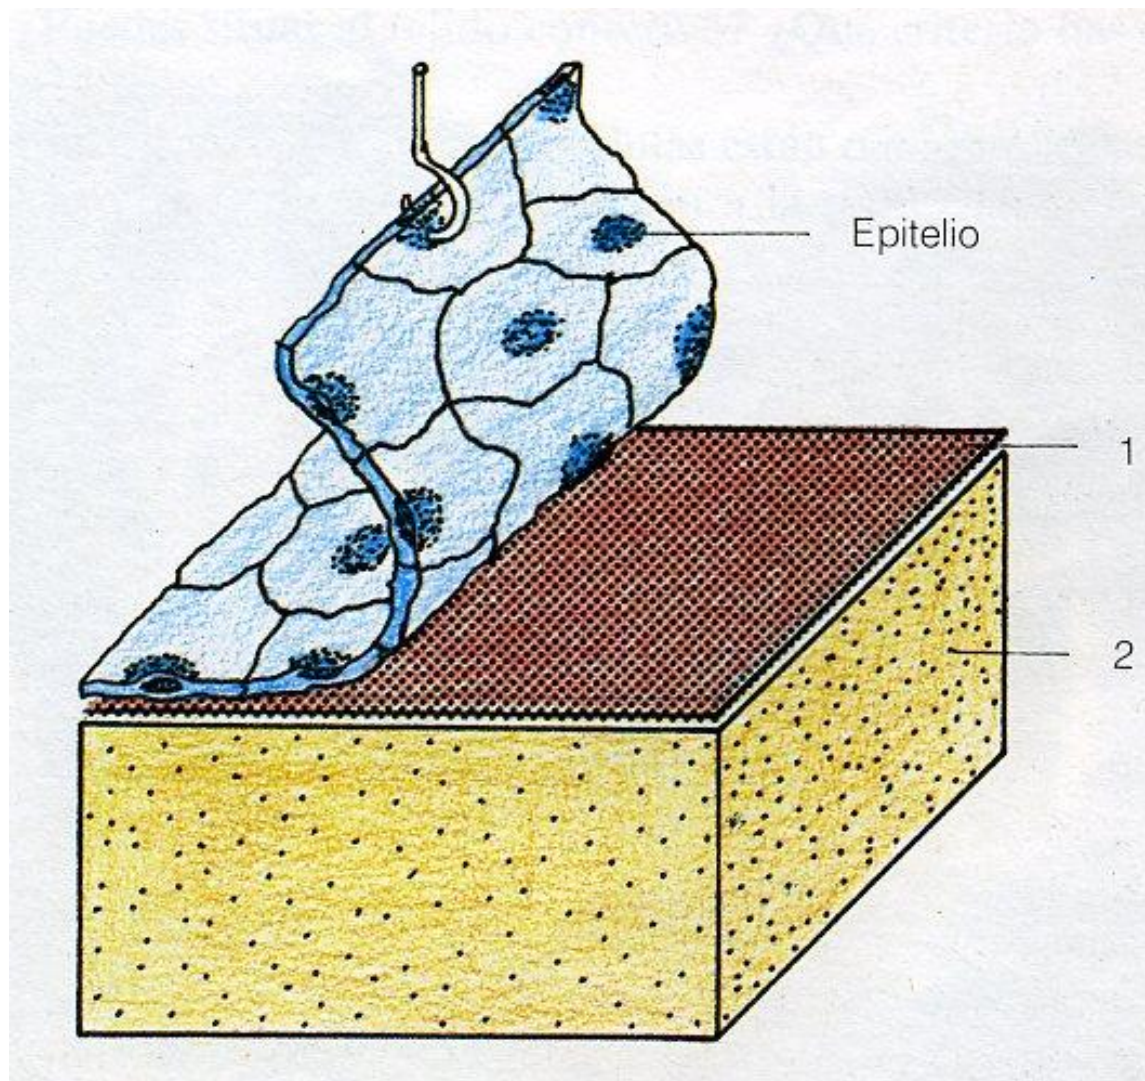

Epitelio con células

Epitelio plano estratificado

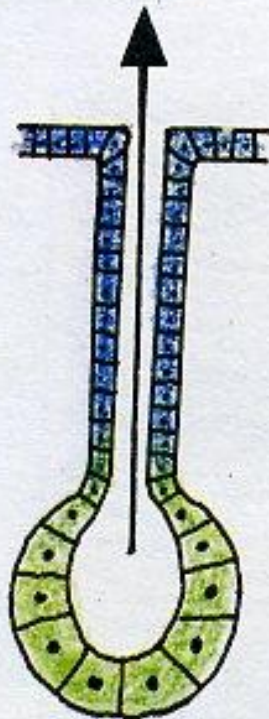

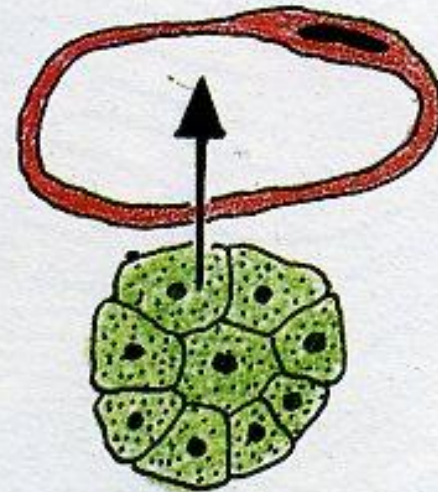

EL PRODUCTO DE SECRECION ES EVACUADO

- por un CANAL EXCRETOR (salvo excepciones)
- en el MEDIO EXTERNO

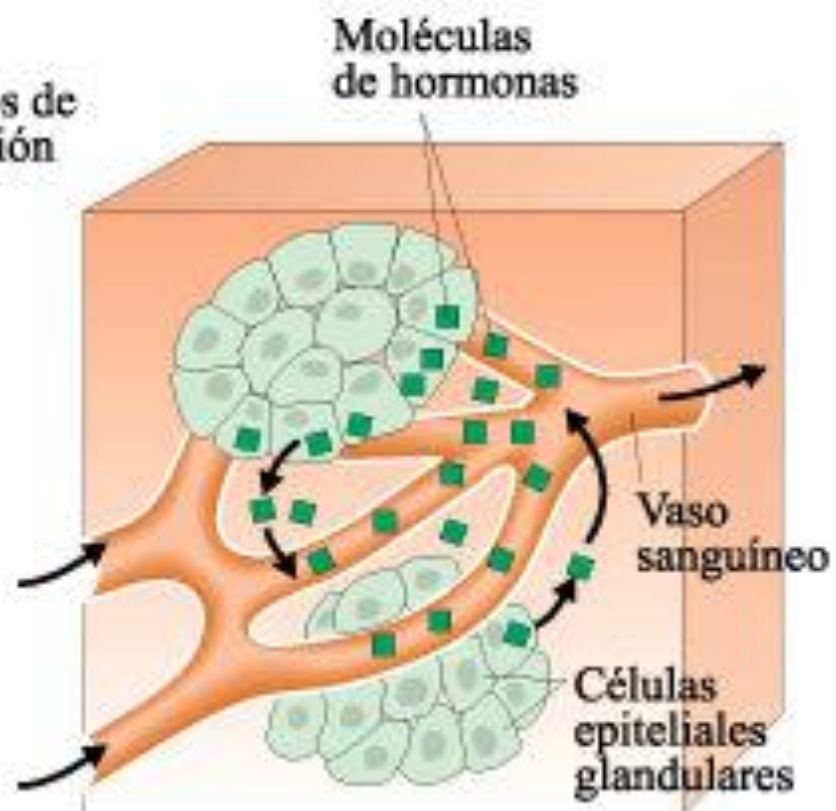

- DIRECTAMENTE
- en la SANGRE

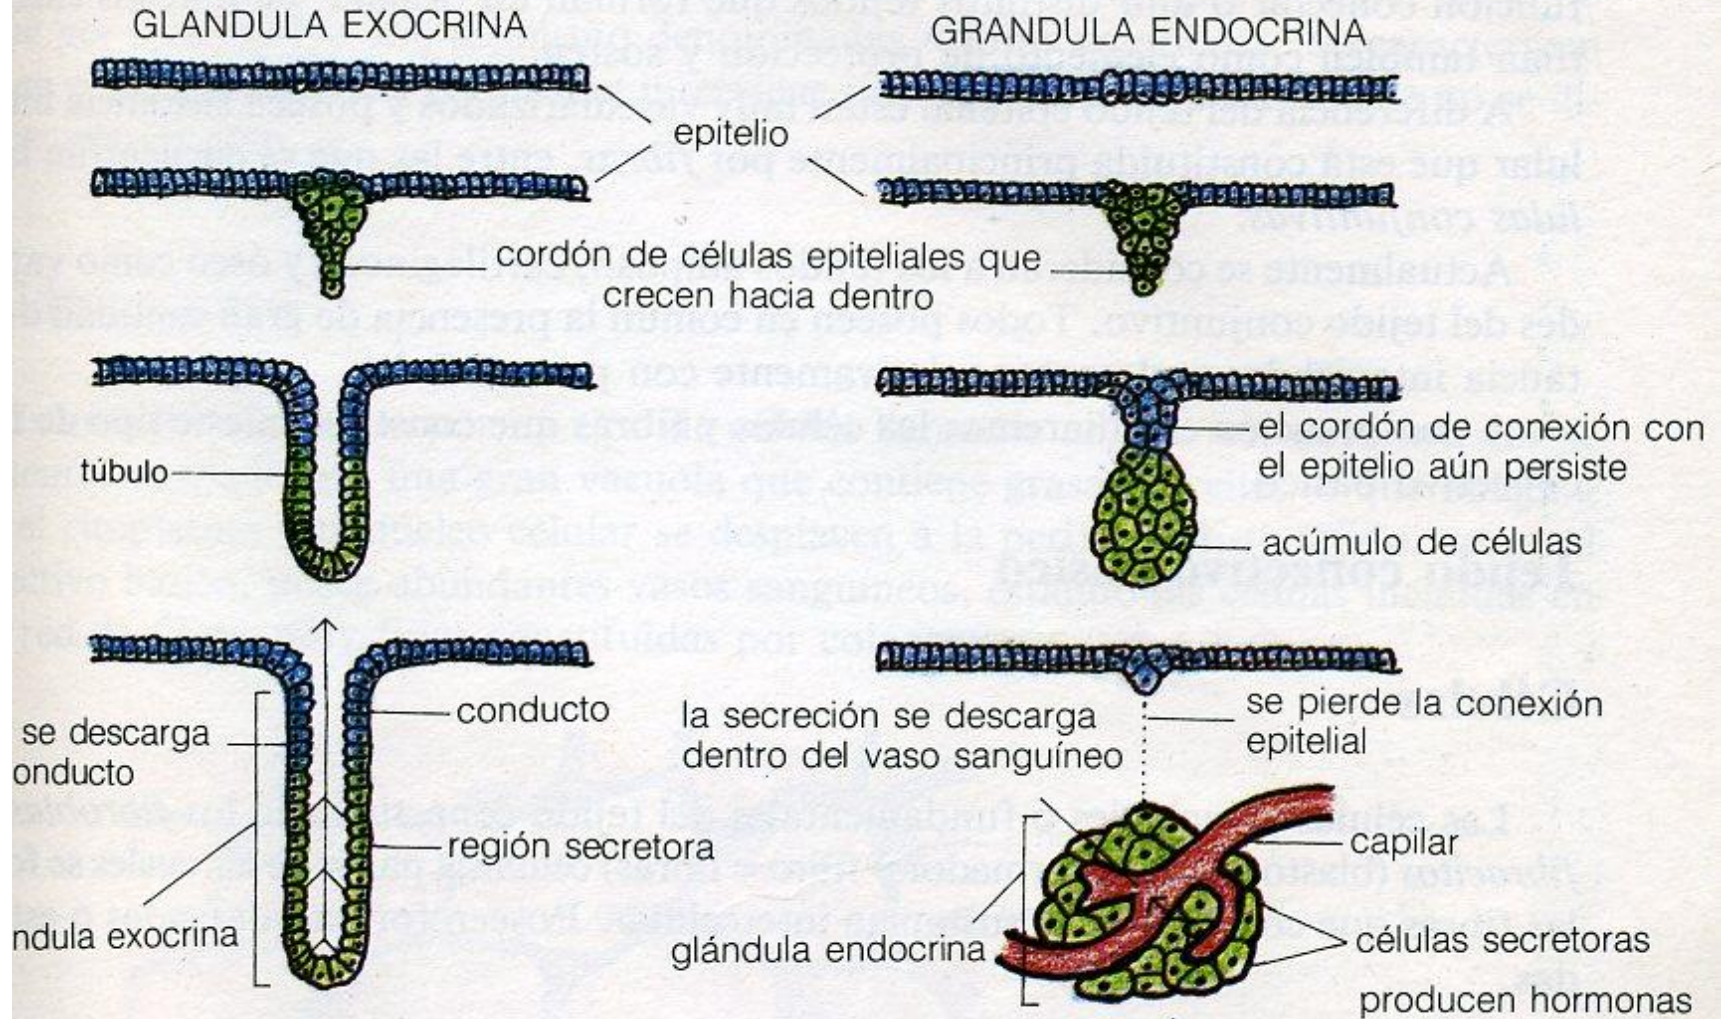

(a) Glándula exocrina

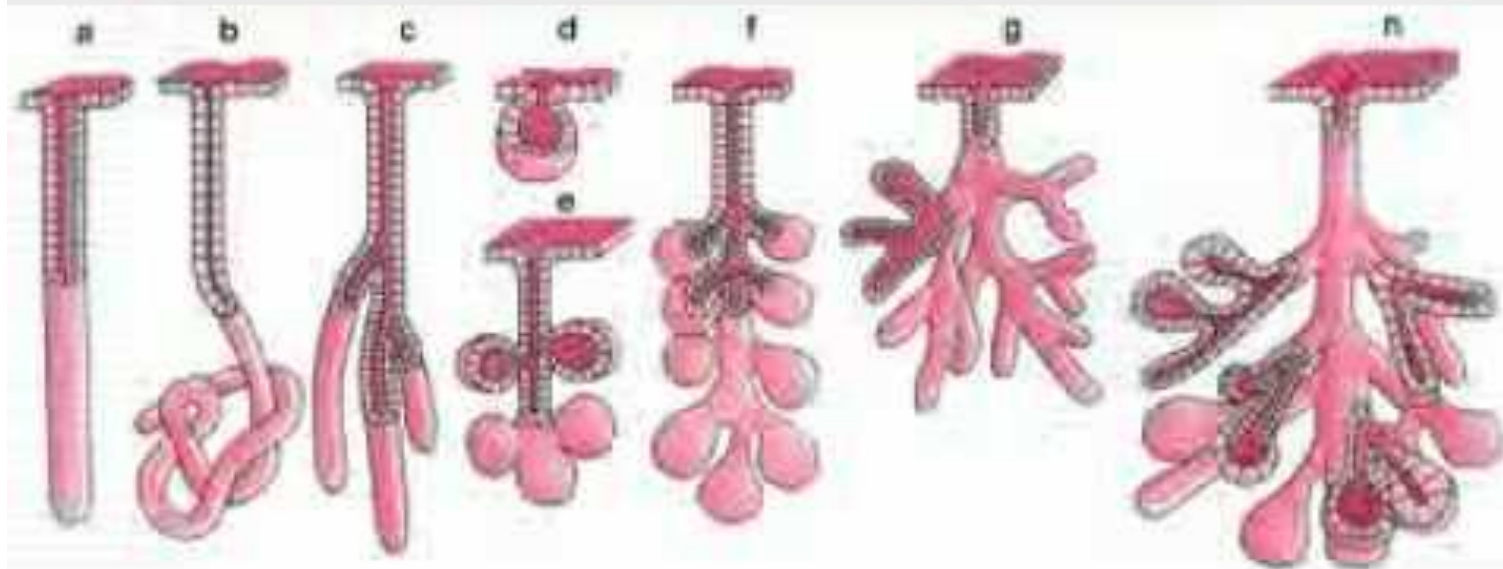

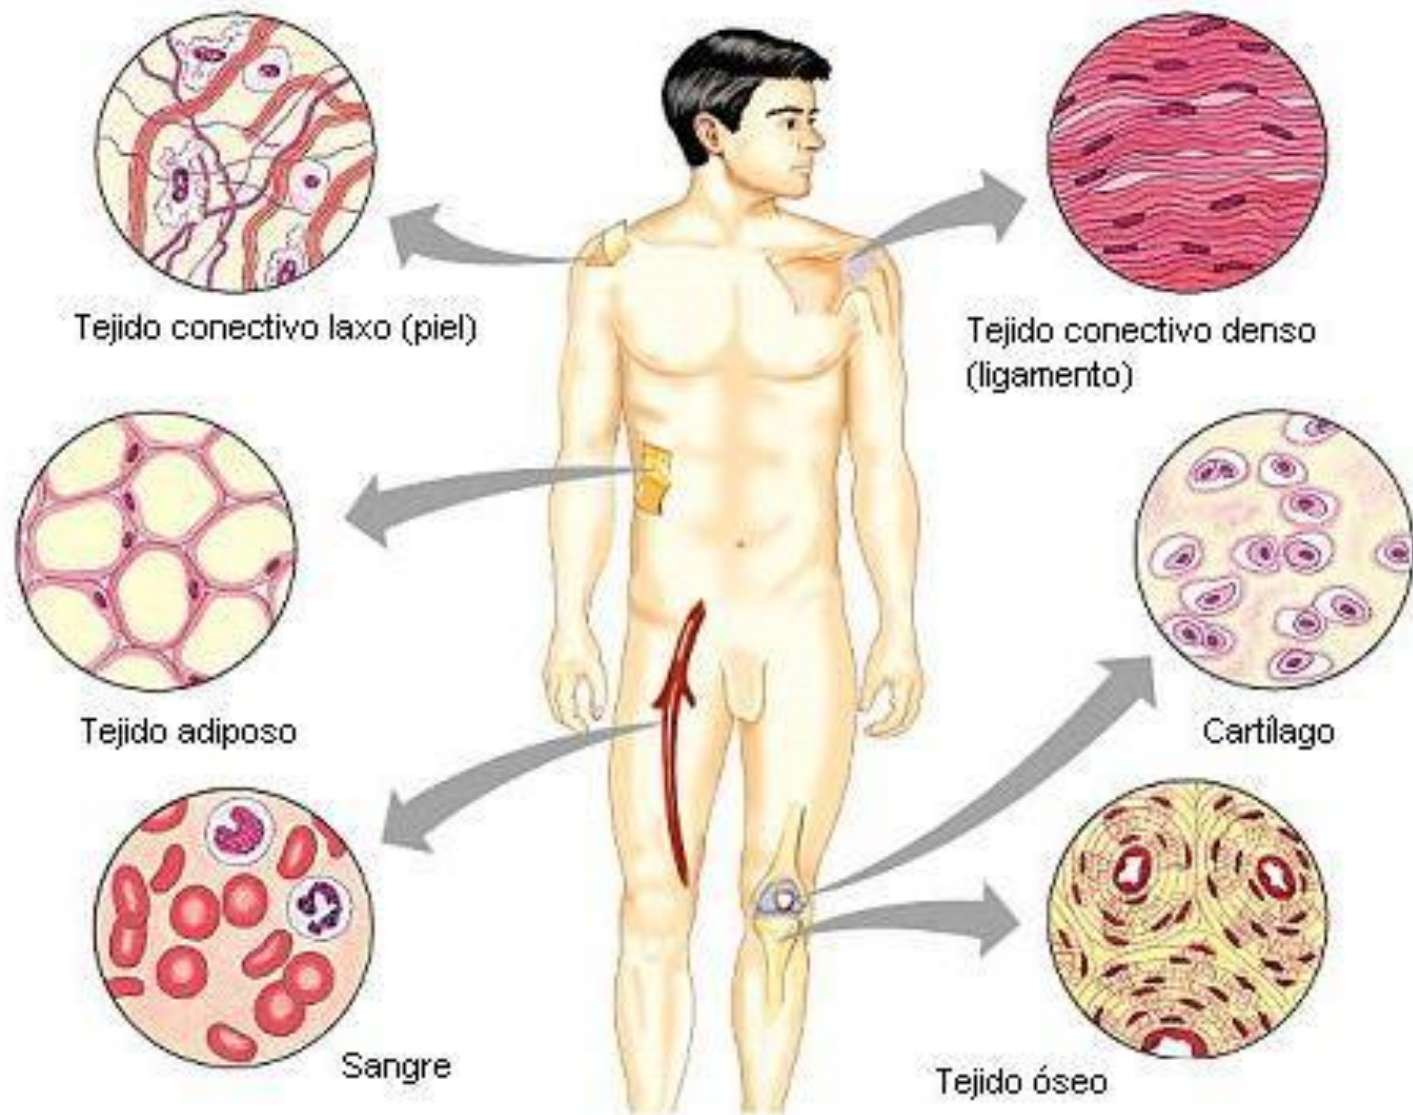

(b) Glándula endocrina

Origen de las glándulas

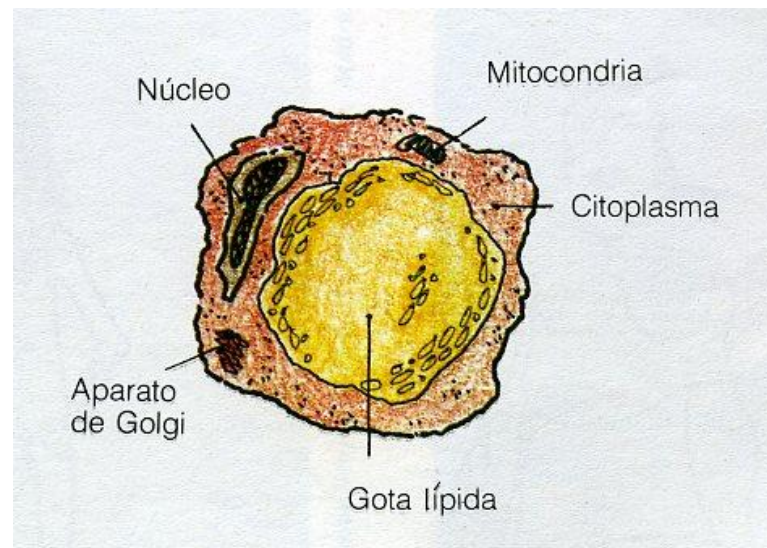

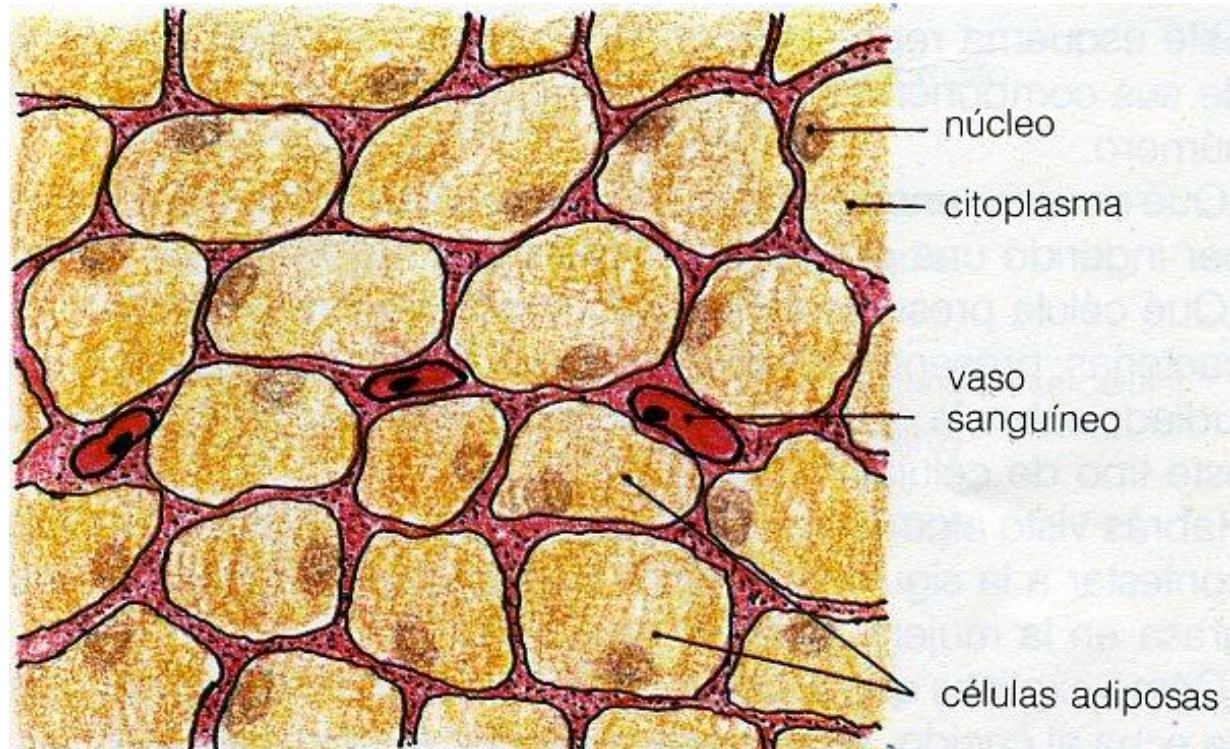

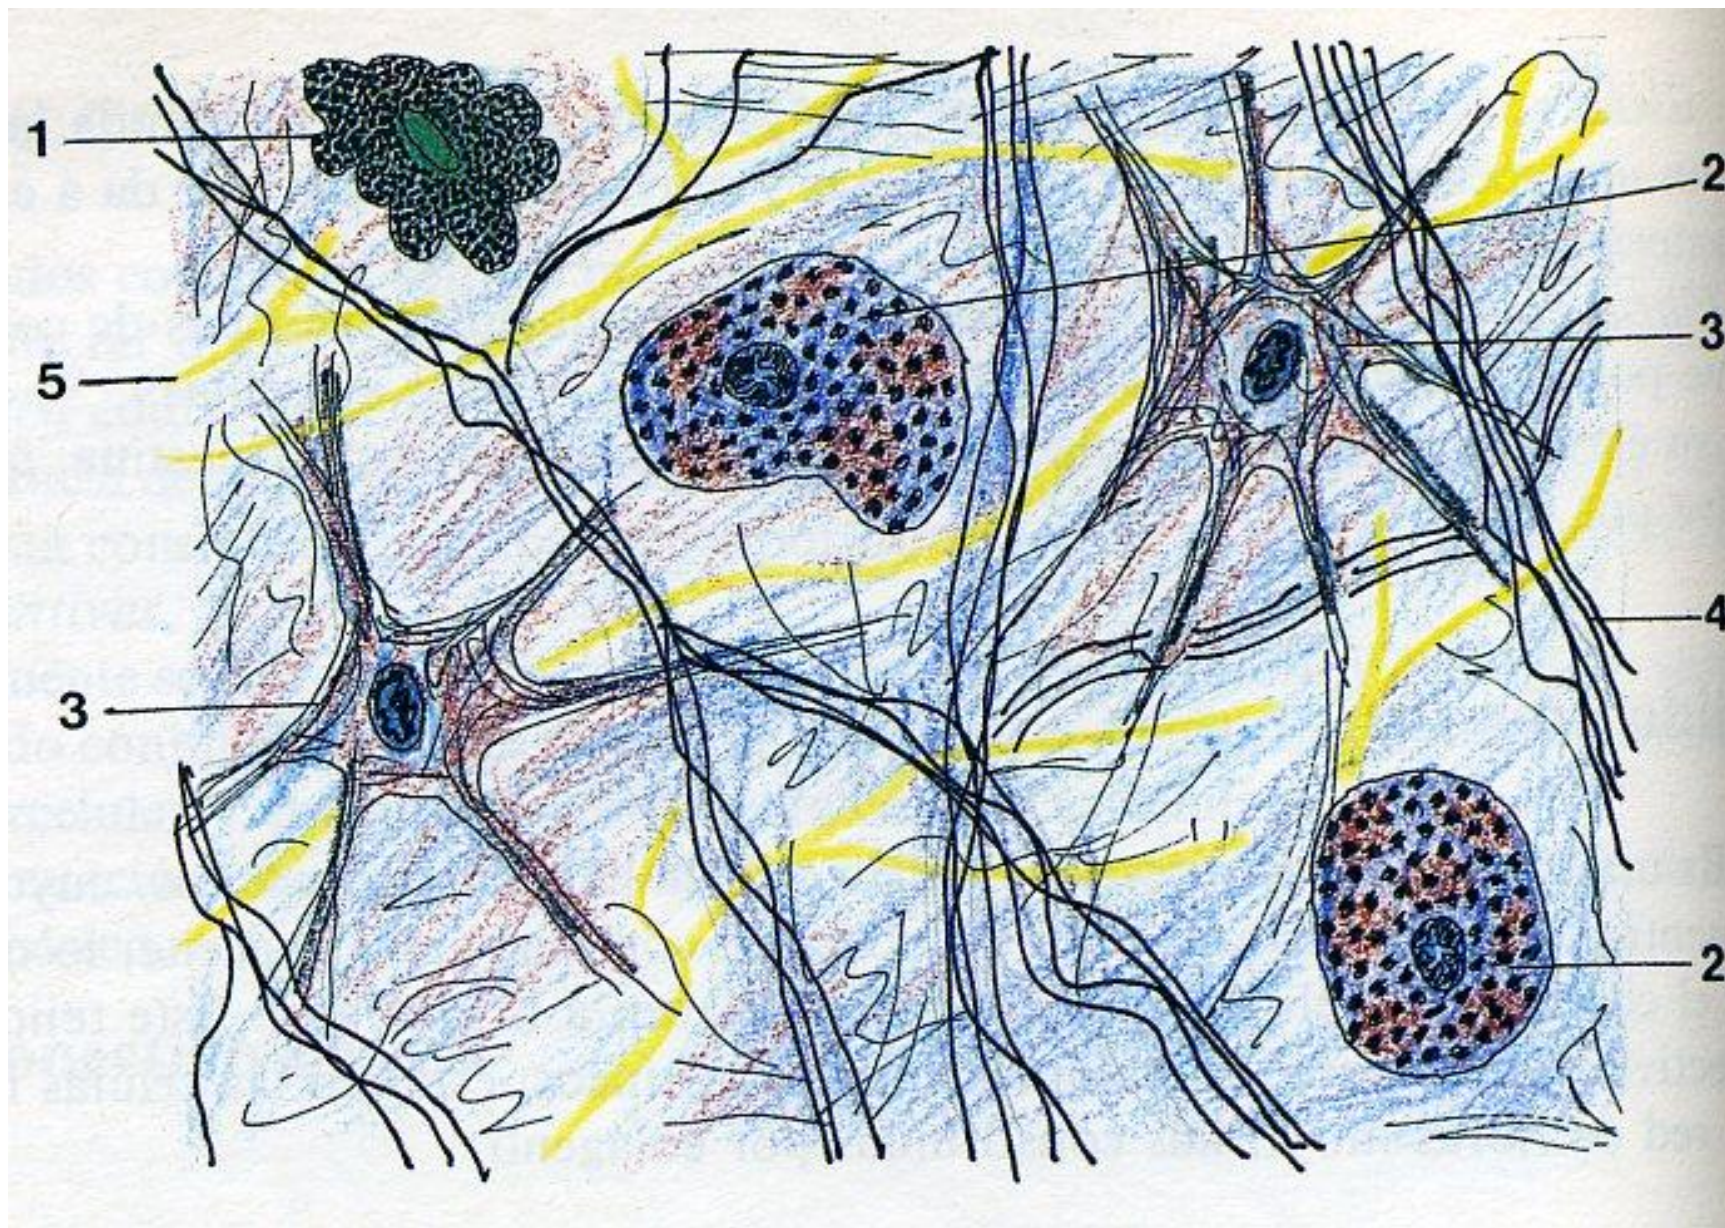

Glándulas multicelulares exócrinas

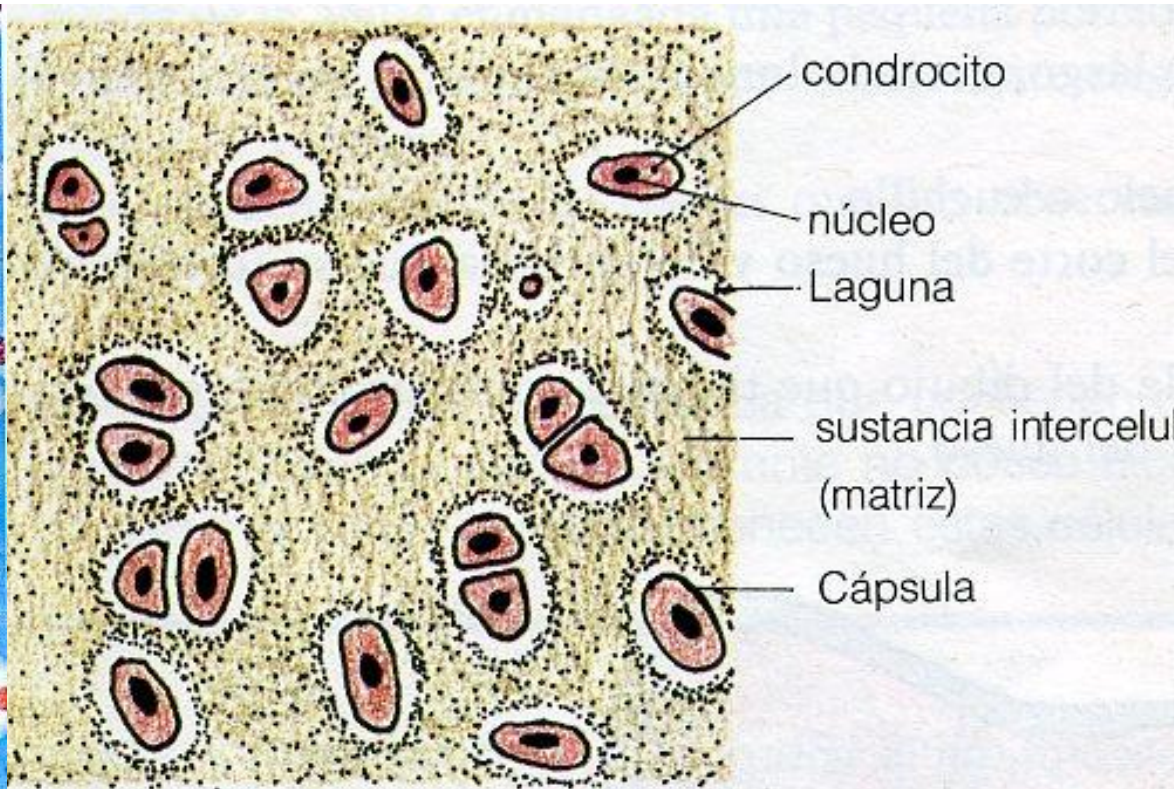

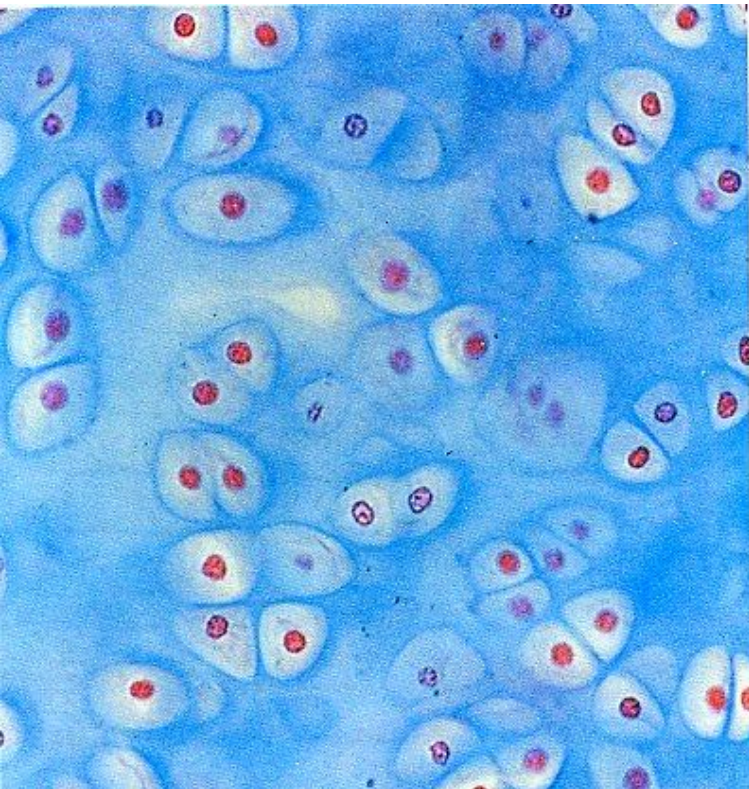

TECIDO ADIPOSO E ADIPOCITO

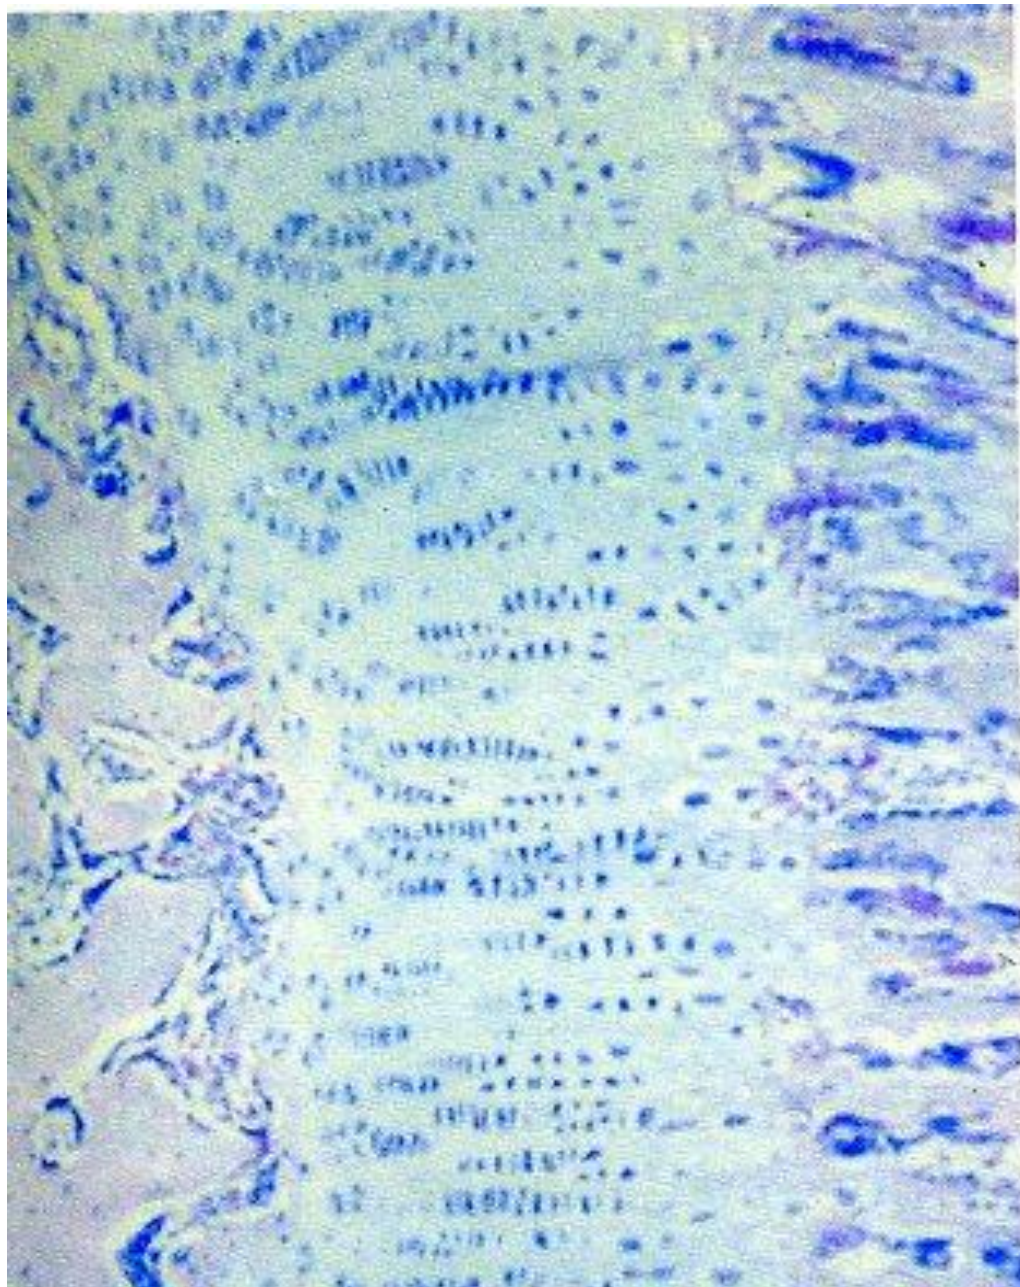

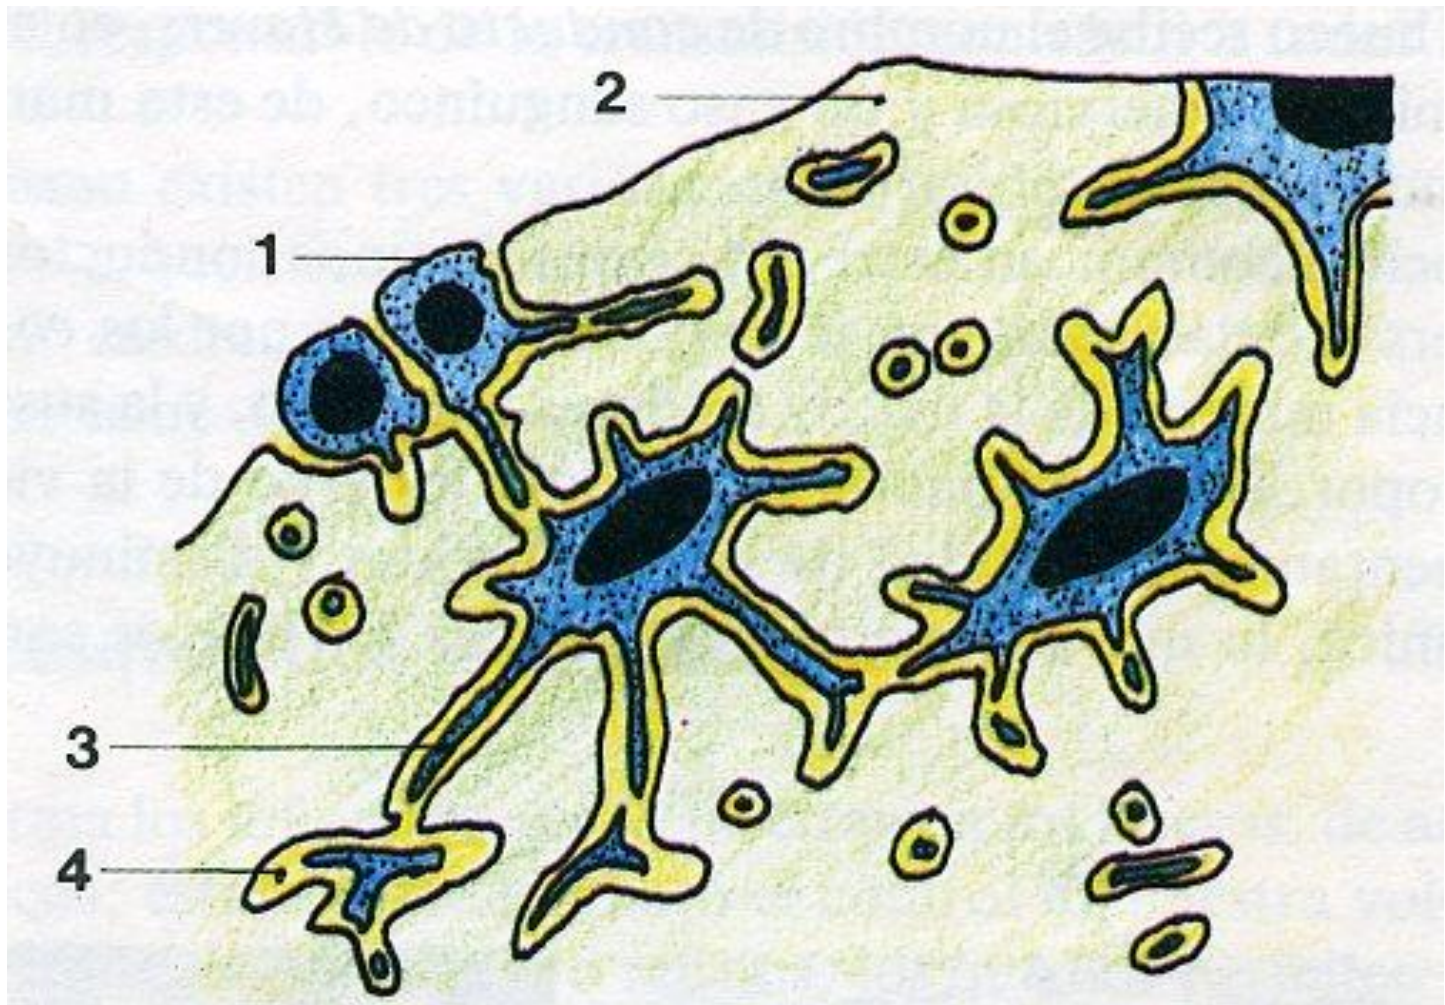

TECIDO CONJUNTIVO IDEAL

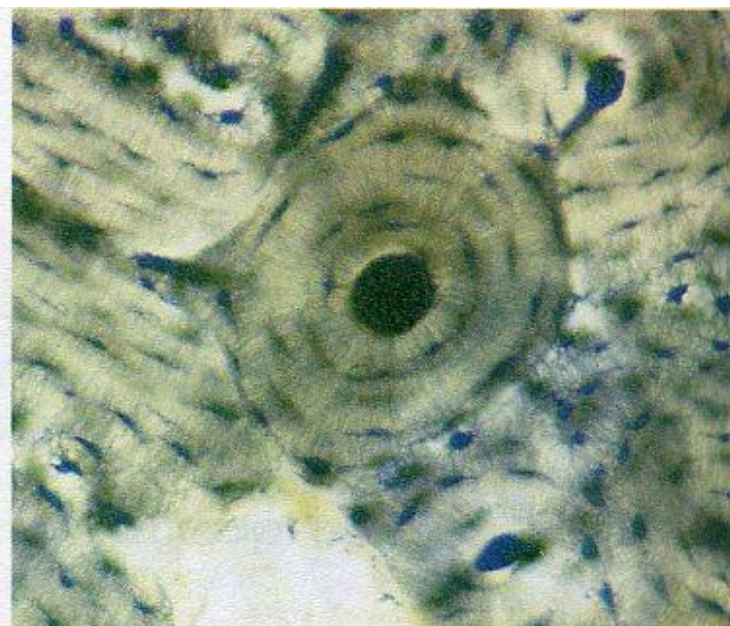

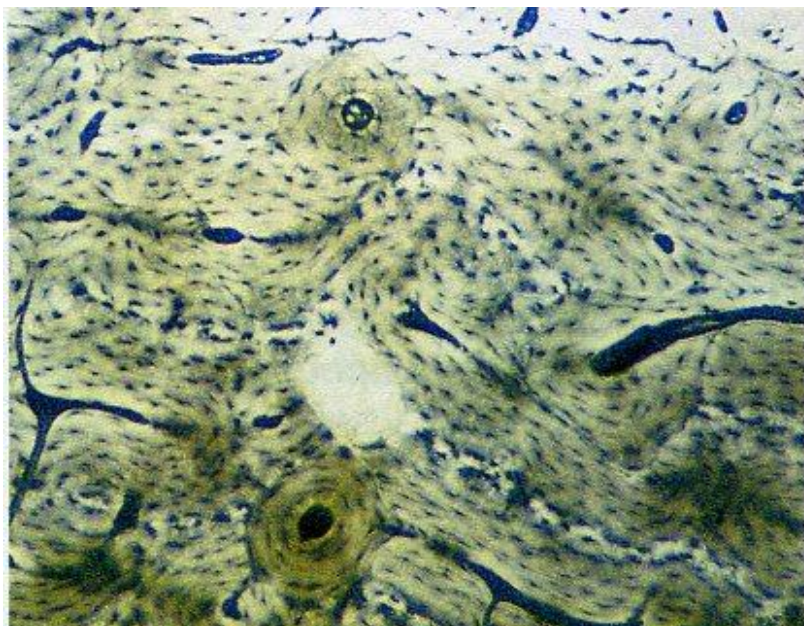

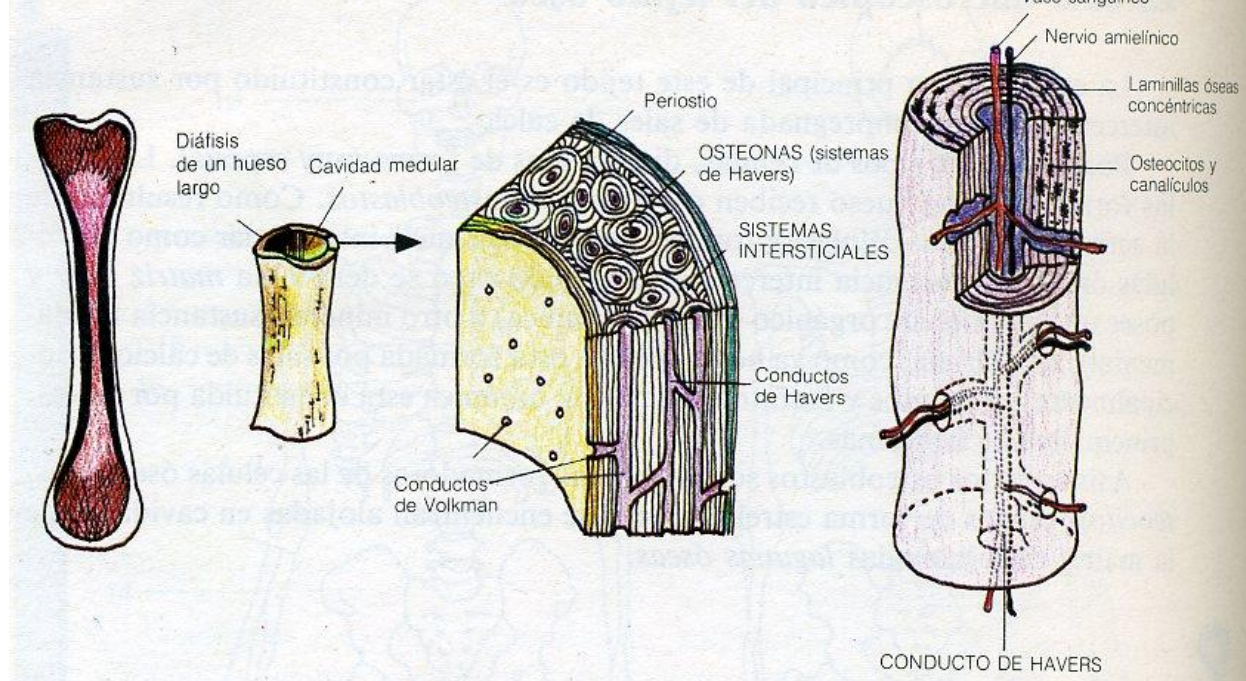

TECIDO CARTILAXINOSO

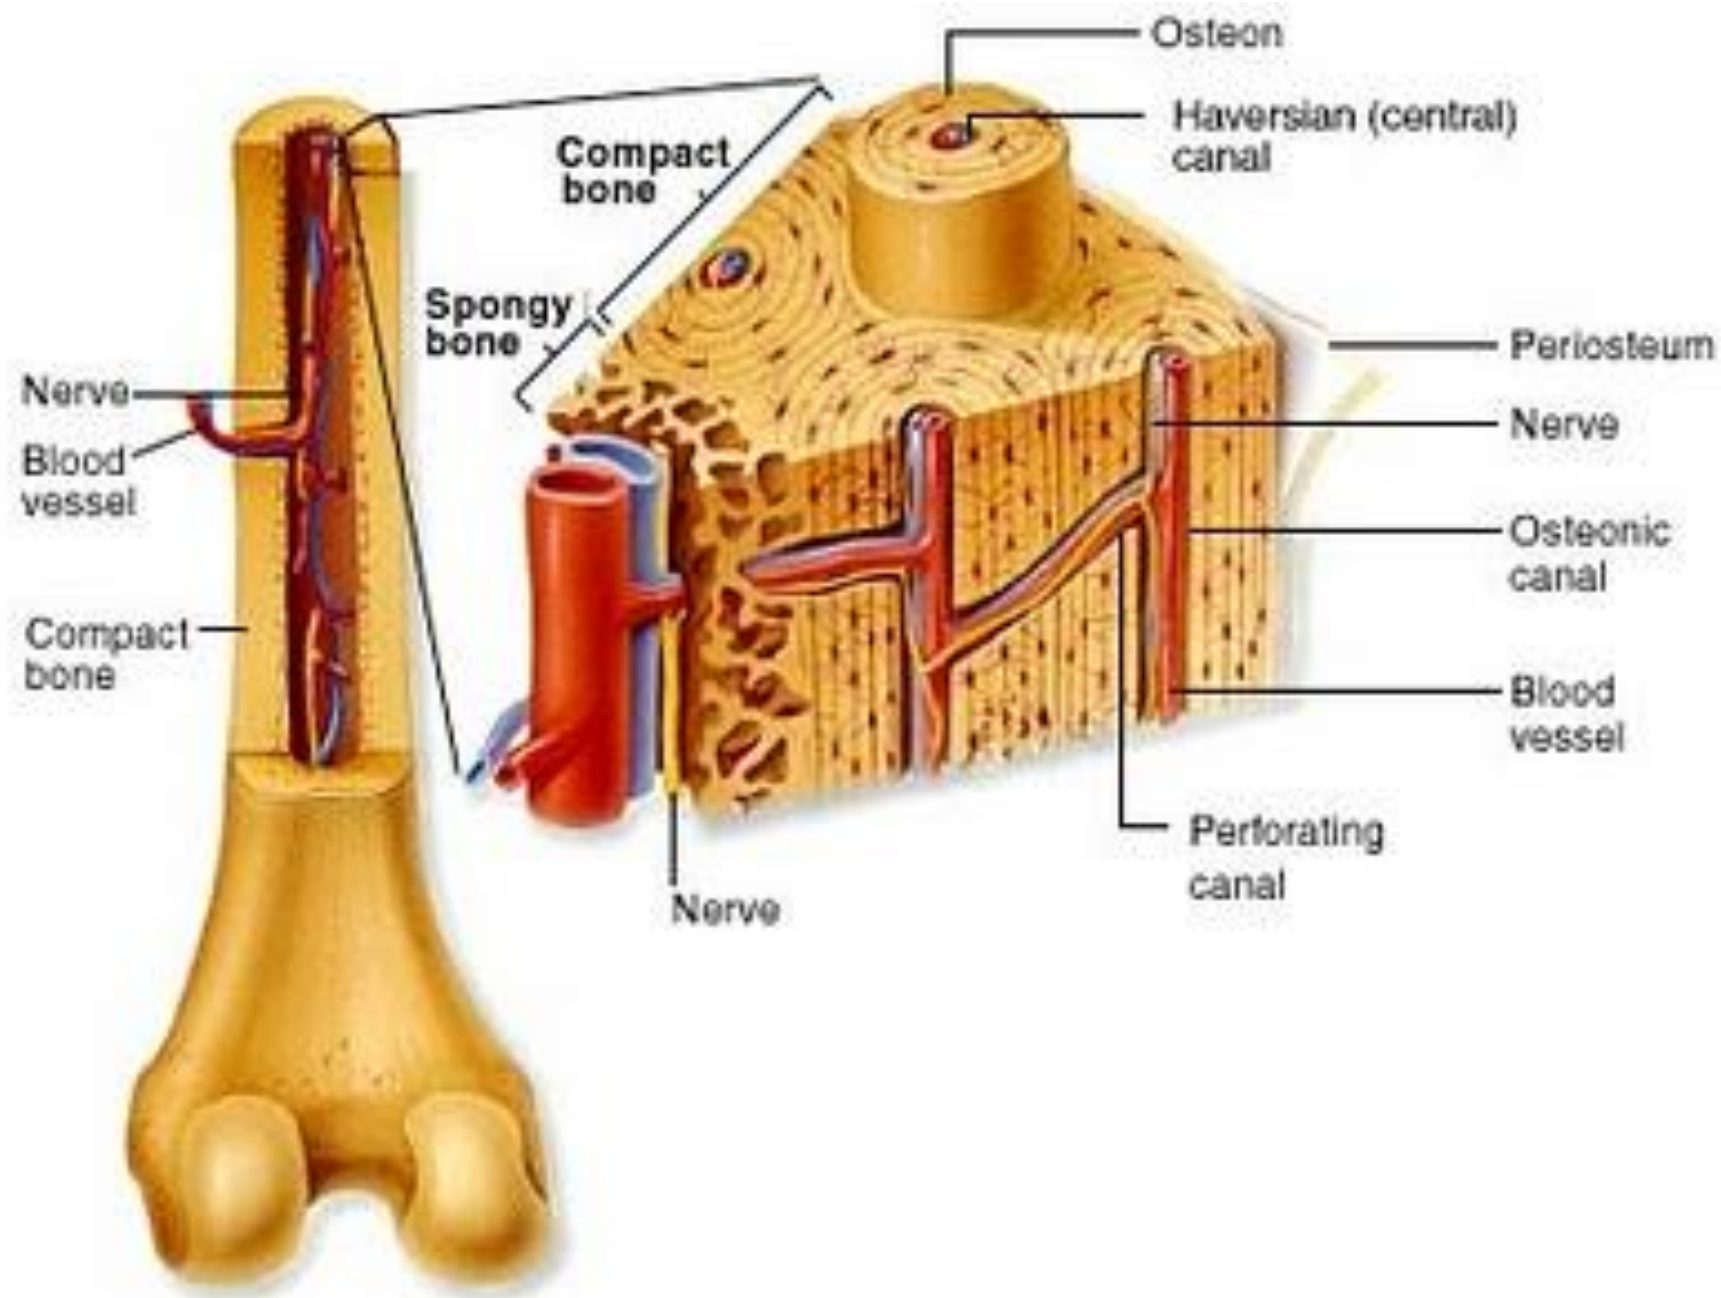

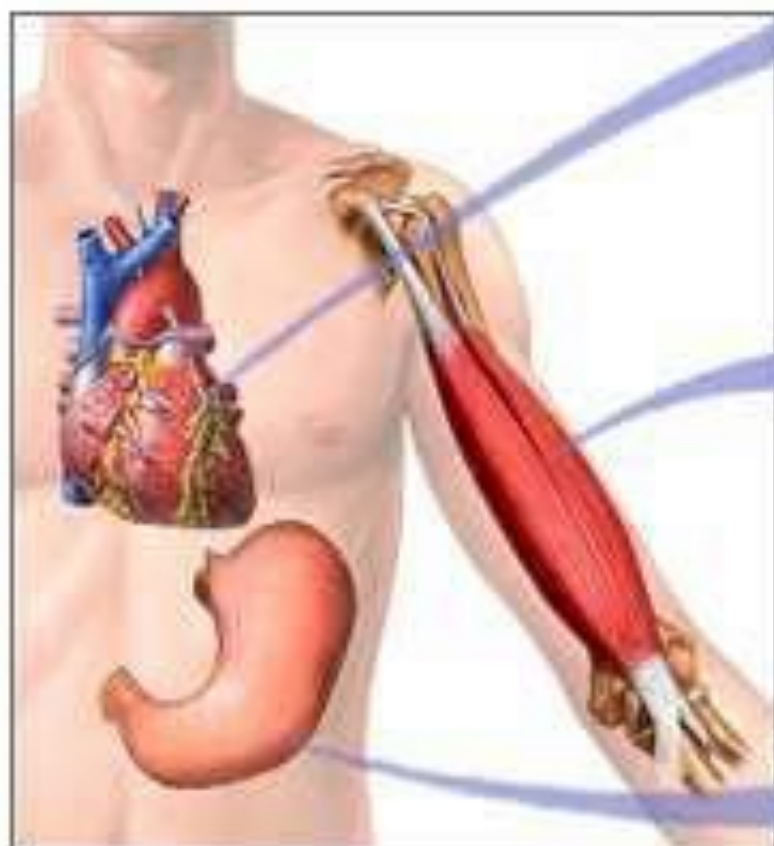

CARTÍLAXE

OSTEOCITOS

Célula muscular
cardíaca

Célula muscular
esquelética

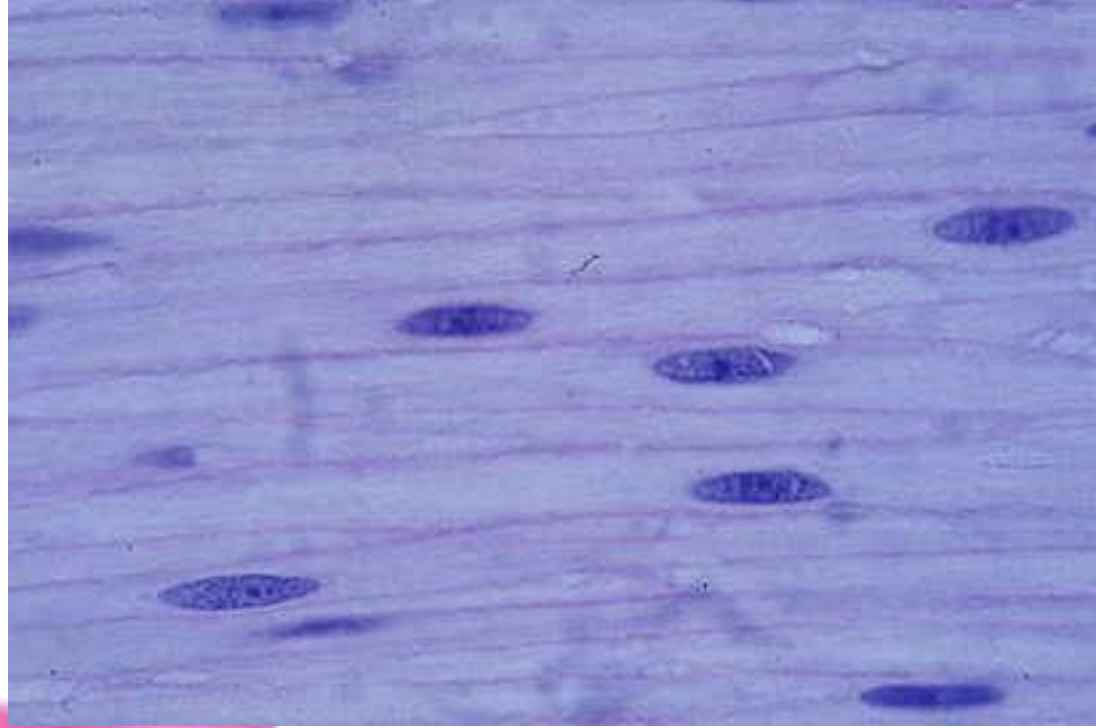

Célula muscular lisa

Fibras musculares estriadas

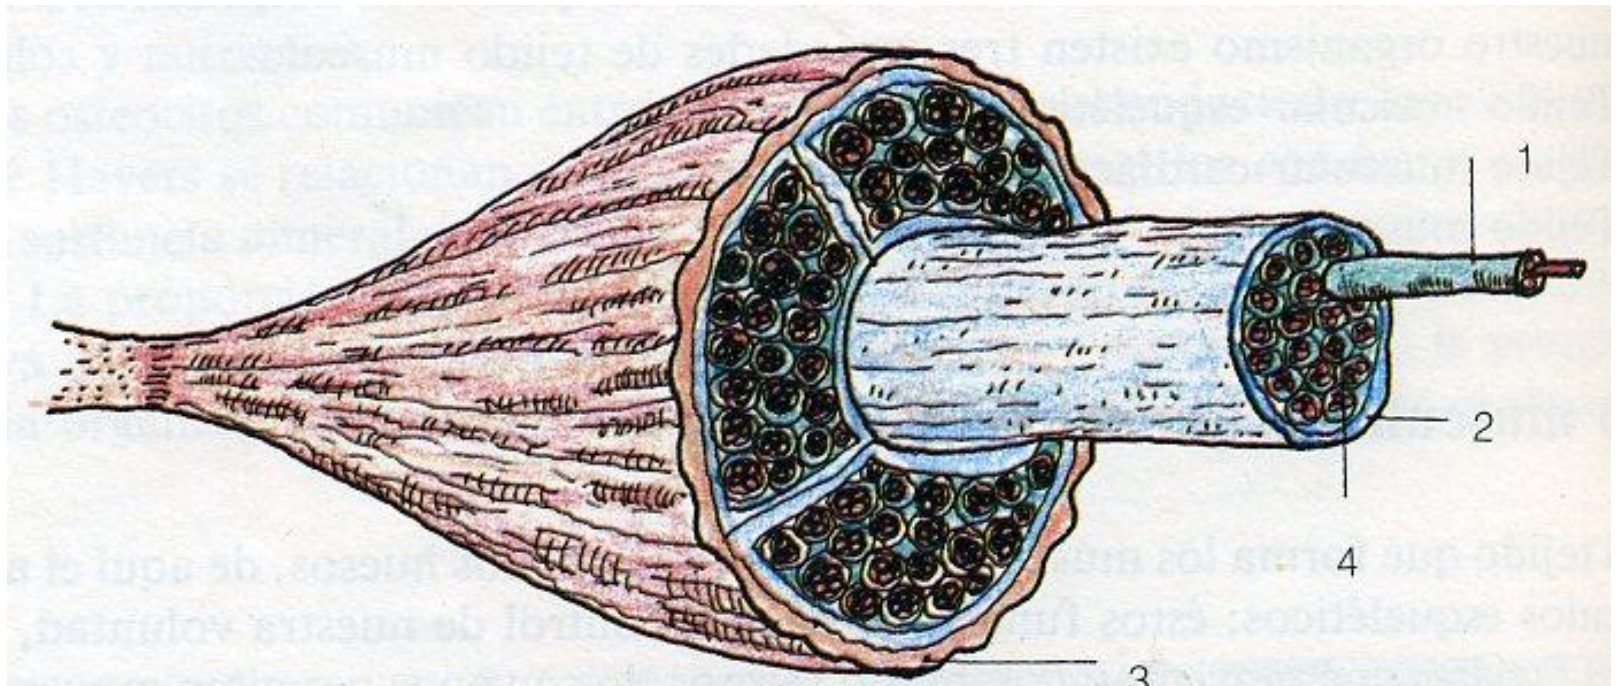

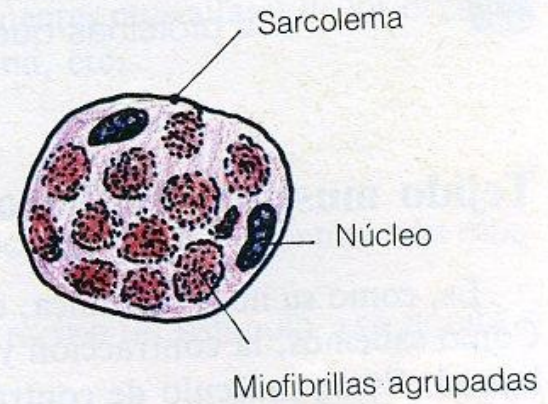

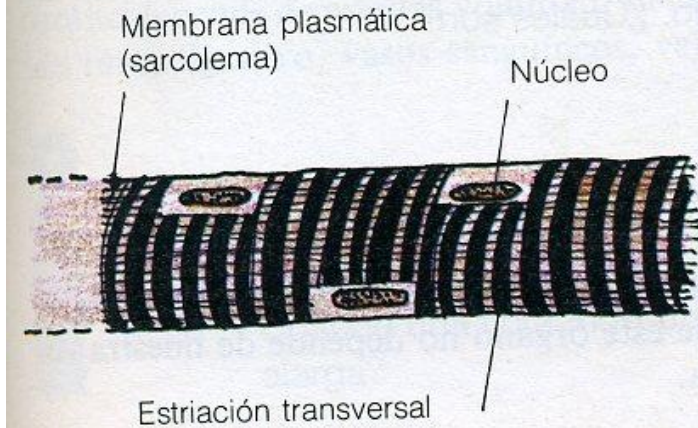

Fibras musculares lisas

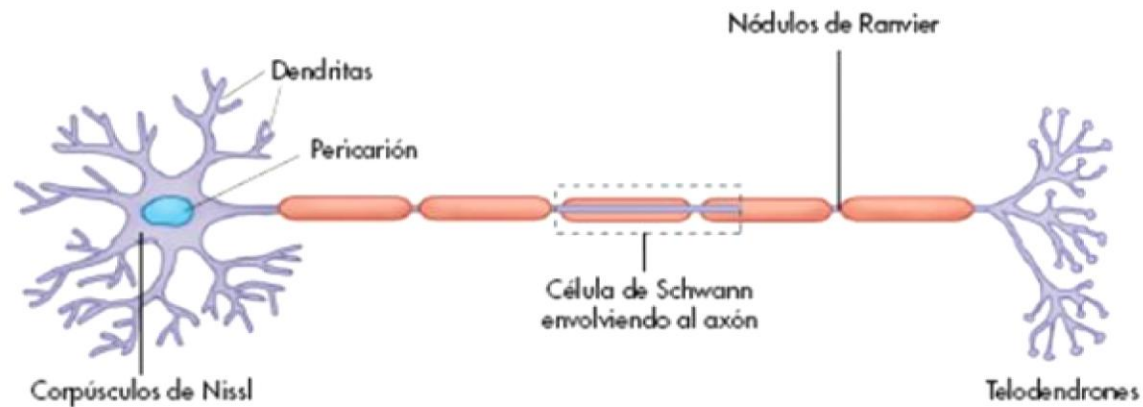

FIBRA MUSCULAR ESTRIADA E MÚSCULO

transversal de dichas bandas.

TECIDO NERVIOSO

Unipolar

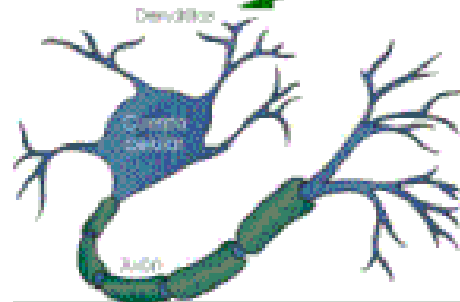

Bipolares

Multipolares

TEJIDO NERVIOSO

está formado por

Neuronas (Es la unidad básica del sistema nervioso. Están conectadas entre sí y transmiten información.)

partes

Cuerpo celular

Se compone de un núcleo y citoplasma

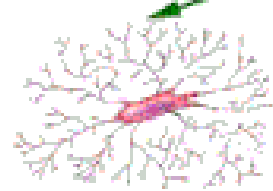

Axón

La información entra por las dendritas y sale por el axón

Dendritas

Células gliales

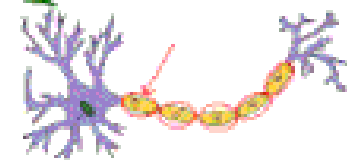

tipos

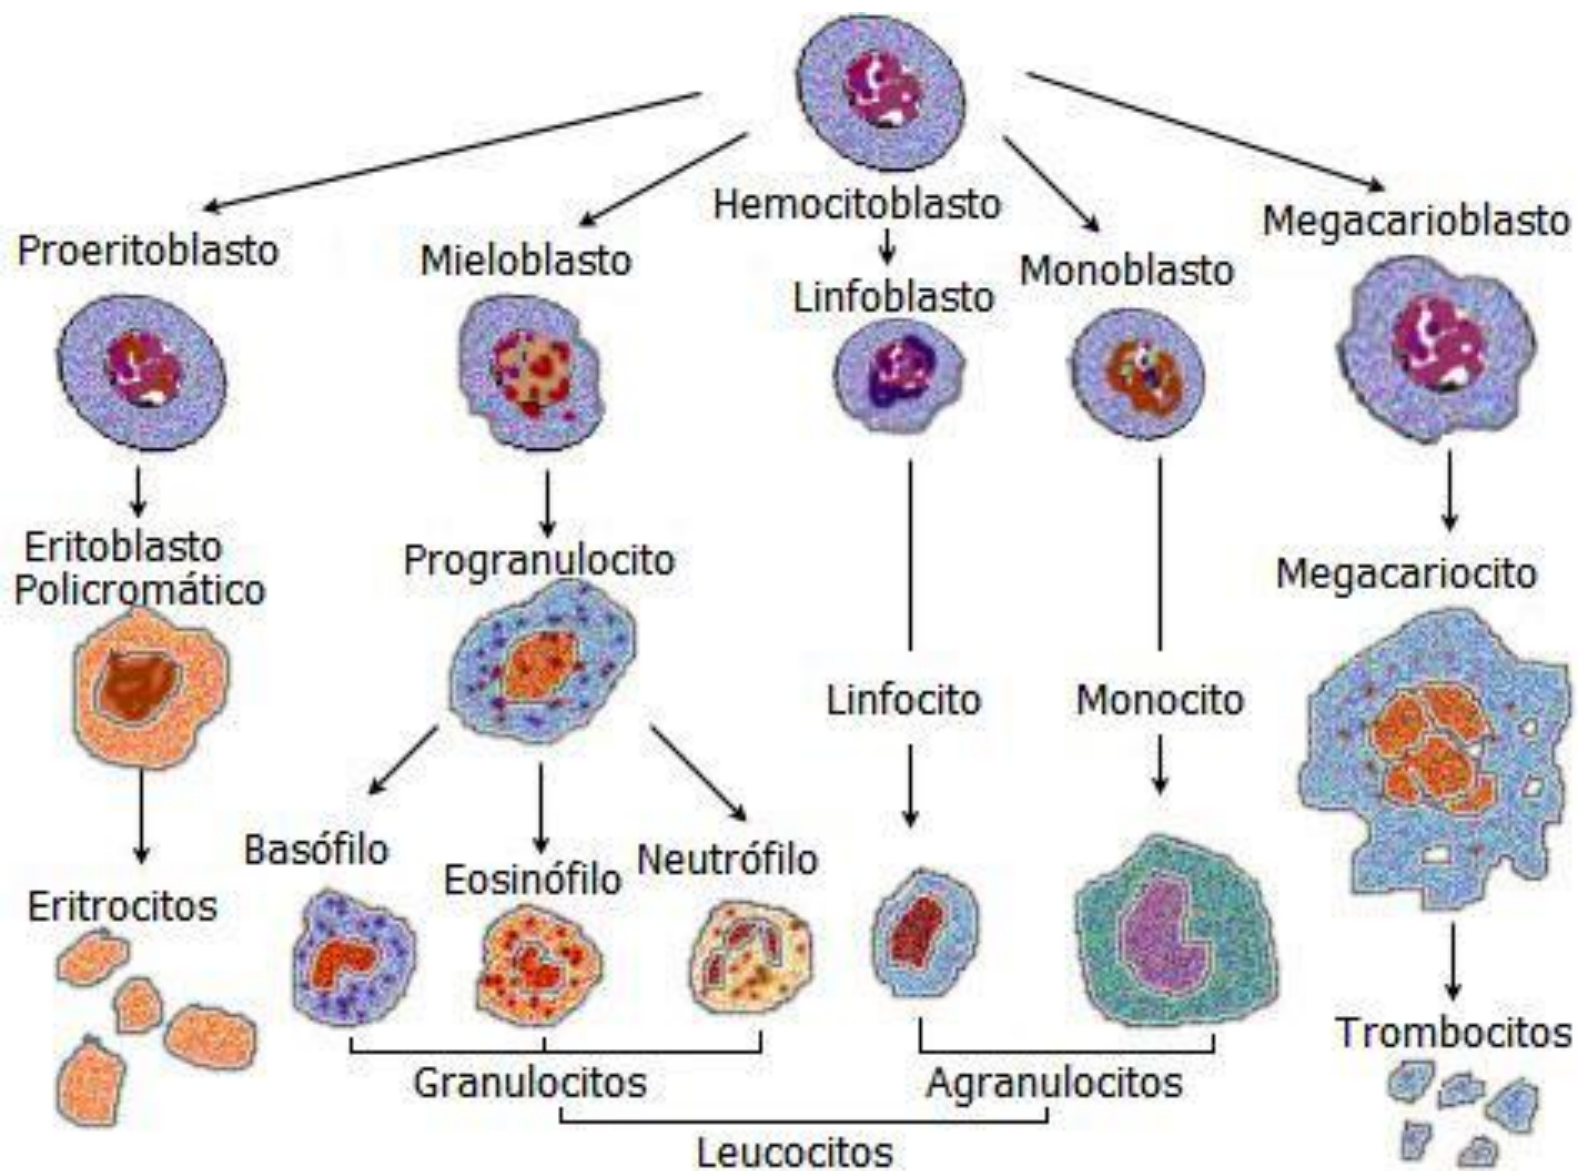

Microglía
Defienden la célula de infecciones

Astrocitos
Están en los vasos sanguíneos y proporcionan nutrientes a las células

Células de Schwann
Aíslan las células mediante una capa de mielina que rodea el axón

Eritrocito

Leucocito
neutrófilo

Leucocito
basófilo

Leucocito
eosinófilo

Linfocito

Monocito

Plaquetas
