

Vowel sounds and diphthongs

In many English words, the spelling is different from the pronunciation. The same letters can sometimes represent different sounds, for example: *fun*, *fur*, *put*, *rude*. In many cases, different letters are used to represent the same sound, for example: *let*, *heavy*, *friend*, *bury*, *said*.

There are only twenty-six letters in the alphabet, but they represent over forty-four different sounds. Spoken English has a very high number of vowel sounds. There are twelve single vowels and eight diphthongs.

- 1 74 Listen to the sounds. What is the difference between the sounds in A and the sounds in B?
