

Discontinuidades

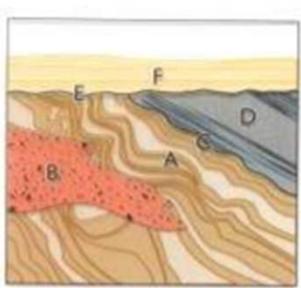

Falta de información nun período de tempo (non hai rochas que identifiquen): NON HAI REXISTRO ESTRATIGRÁFICO

Por que?

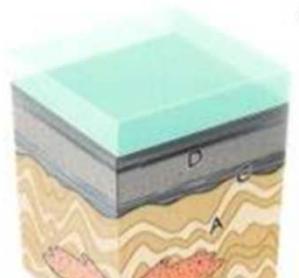

- Procesos erosivos
- Falta de sedimentación

Formation of an angular unconformity

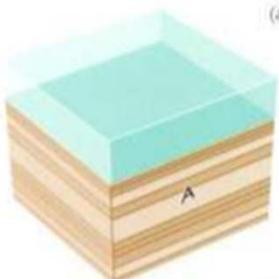

Cross section
of current field
relations

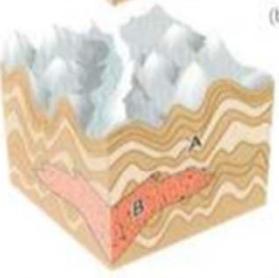

(d) Subsidence and marine
deposition of D over
unconformity C

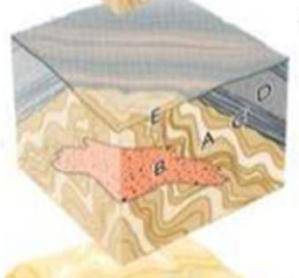

(a) Deposition of A

(e) Tilting and uplift

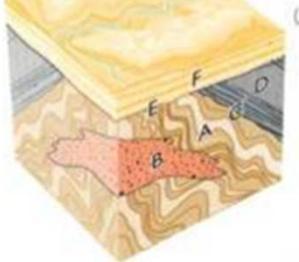

(b) Metamorphism and deformation
of A, followed by
uplift and intrusion
of B

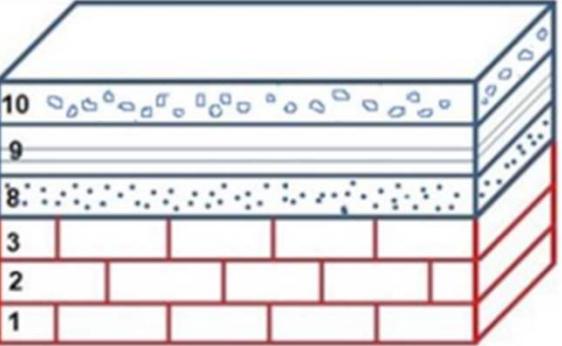

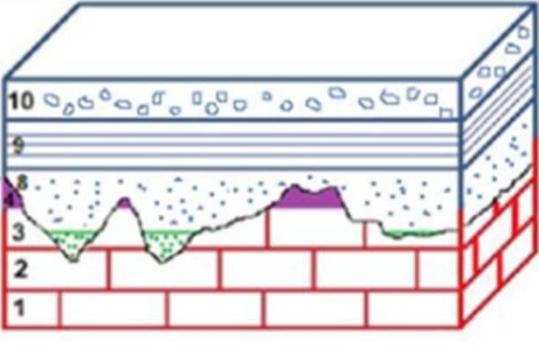

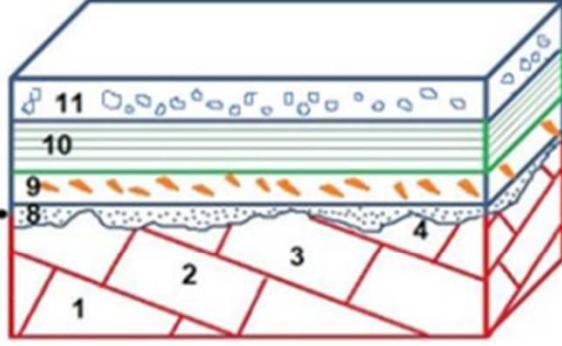

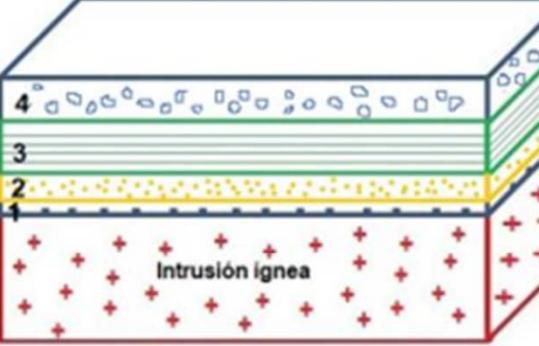

(f) Erosion to a plain

(c) Erosion of A to plain

(g) Deposition of F over
unconformity E

	
<p>Paraconformidad: paralela sin superficie de erosión visible.</p>	<p>Disconformidad: con estratos paralelos por abajo y por encima de una superficie de erosión con paleorelieve.</p>
	
<p>Discordancia angular y erosiva: los estratos más antiguos buzan (se inclinan) con un ángulo diferente al de los más jóvenes (implica movimientos tectónicos).</p>	<p>Inconformidad: se forma entre las rocas metamórficas o ígneas (que pueden conformar el basamento de la cuenca o una intrusión plutónica tipo stock) y la serie sedimentaria suprayacente.</p>
