.....

Homework 3: 19th April – Friday 24th April

ANSWERS

Ex. 9 page 57

Answer the questions. Type the answers.

1. What information can an odour print reveal?

your age, genetics, lifestyle and health

2. How would medicine improve if people had a better sense of smell?

Doctors would probably be able to detect many illnesses in their early stages. They could then treat them before they got worse.

3. What can the Na-Nose do?

It can detect 17 different diseases by analysing a patient's breath. Moreover, if a healthy person is at risk of getting a disease in the future, the Na-Nose will detect that too.

4. Why is it important to get information about illnesses as soon as possible?

People's chances of getting better will improve.

5. How will people probably use the Na-Nose in the future?

They will probably use it on their smartphones to analyse their breath while they're talking on the phone. It will tell them if they're ill and what disease they've got.

Ex. 10

Why are the following mentioned in the article? Type the answers.

1. molecules

Thousands of molecules create our odour print

2. diabetes

The breath of people with diabetes sometimes smells like bad apples.

3. dogs

Dogs have got a very developed sense of smell.

4. Hossam Haick

Hossam Haick developed the Na-Nose.
