

Tutorial FlipGrid for Students and Parents

Co-funded by the
Erasmus+ Programme
of the European Union

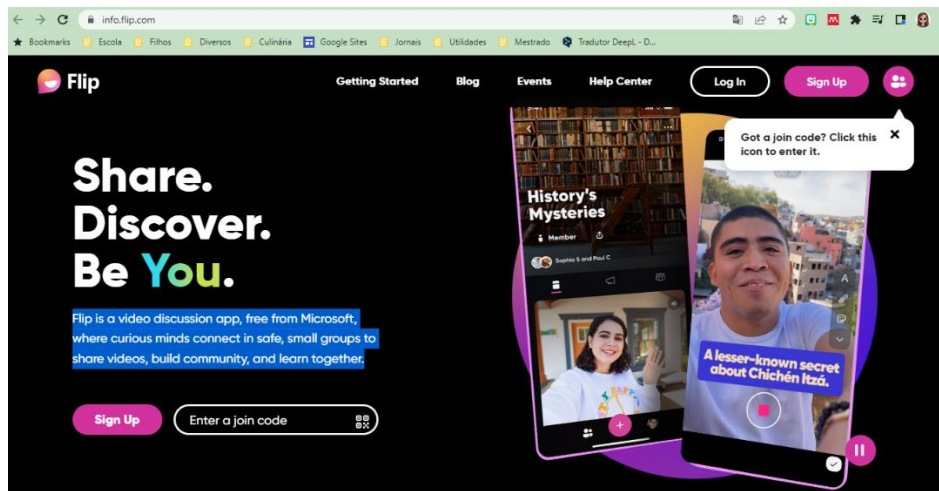

What is FlipGrid

[Flipgrid](#) is an excellent tool for sharing ideas while allowing students to expand their knowledge, with guidance from their teachers. Flip is a video discussion app, free from Microsoft, where curious minds connect in safe, small groups to share videos, build community, and learn together.

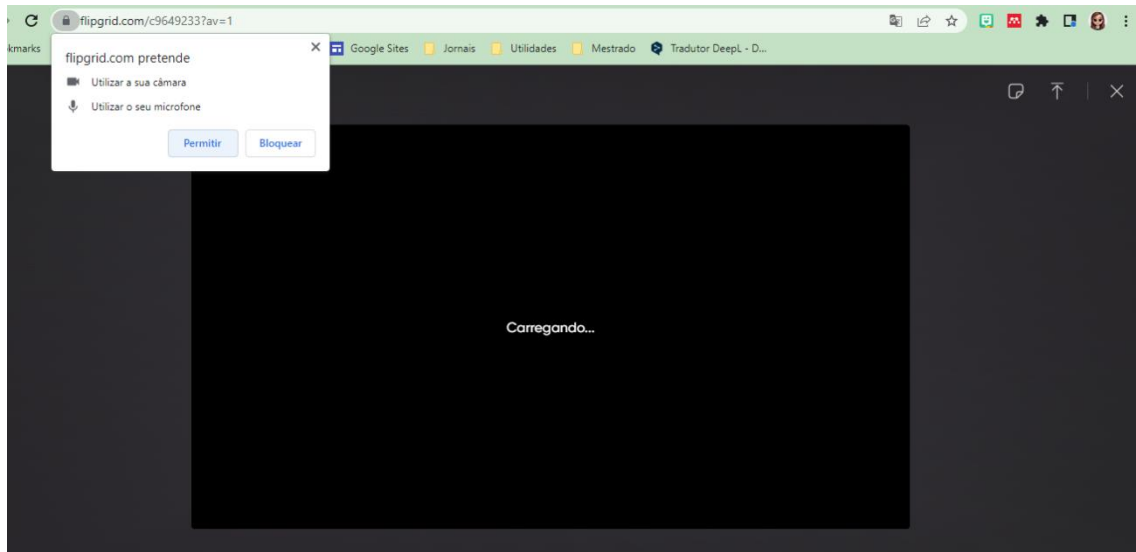

Smaller students, do not have access to FlipGrid, unless they have an access provided by the teacher, thus avoiding possible risks for students. To login to the page, if it is the first time you have to register.

After entering the code provided by the teacher, you must register with your school account.

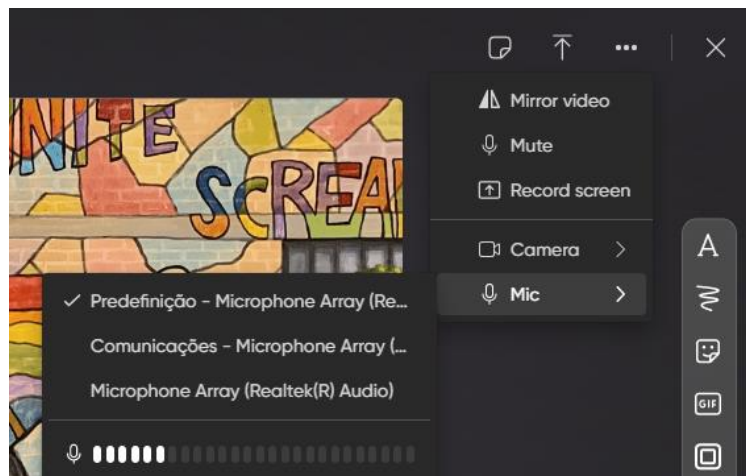

A screenshot of a FlipGrid group page. The group is titled 'Educação para a saúde' and is moderated by 'Ana Luísa Fernandes Franco'. There are three registration options: 'Junte-se à Microsoft', 'Junte-se ao Google', and 'Junte-se à Apple'. A red arrow points from the text 'The registration is done either through a school Office or Google account' to the 'Junte-se ao Google' button. Below the group information, there is a post from '5 de novembro de 2020' with the title 'Educação para a saúde' and the text 'Já foste vítima de bullying na escola? Mensagem de sensibilização...'. A red arrow points from the text 'Entering the group created by the teacher prompts for a response. This response presupposes the preparation of a short video by the student.' to the 'Adicionar resposta' button. To the right, a video thumbnail shows a group of children, with one girl covering her face. The word 'Visão' is visible in the bottom right corner of the video.

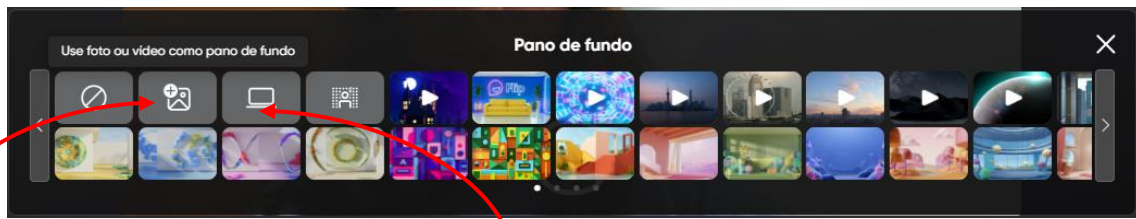

When adding "answer" this space appears, where permission to use the camera and microphone is requested, where we must give this permission in order to make our recordings.

If necessary, we can test the peripherals to see if everything is operational, using the buttons displayed in the upper right corner of the screen, as we can see here:

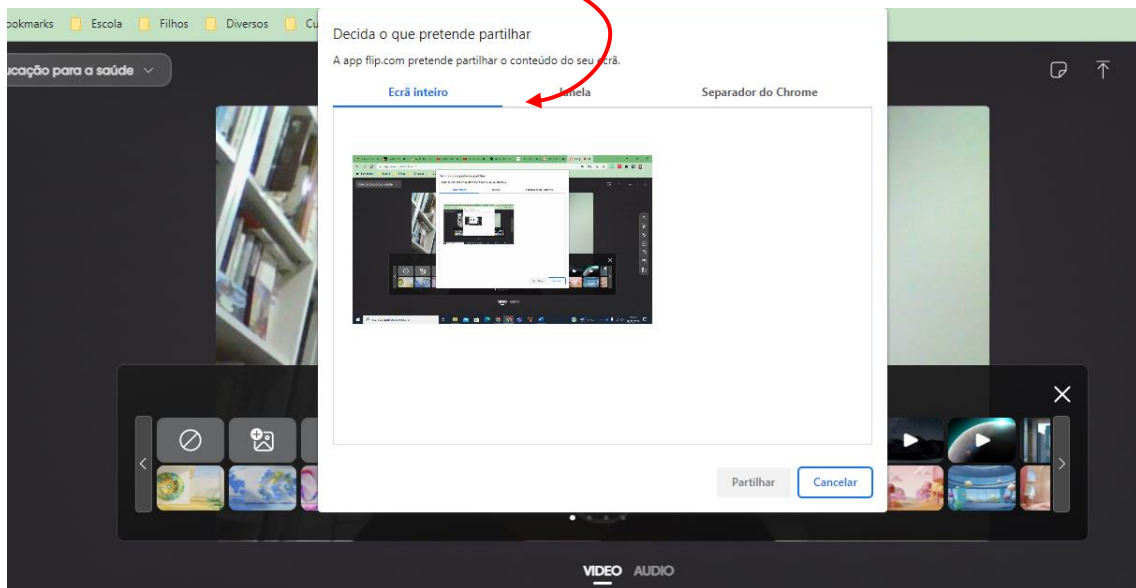

We start by choosing the background:

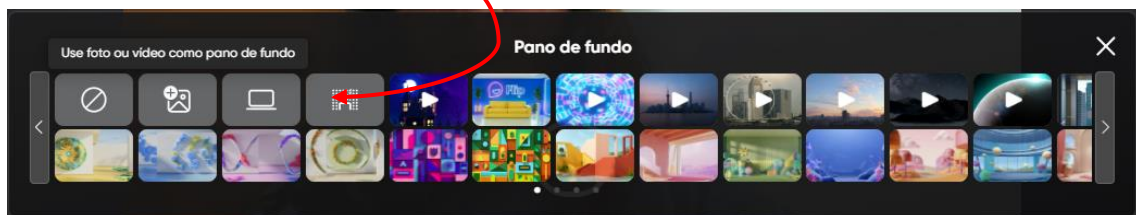

We can choose one of the suggested backgrounds or other options such as:

“Use photo or video as backdrop”;

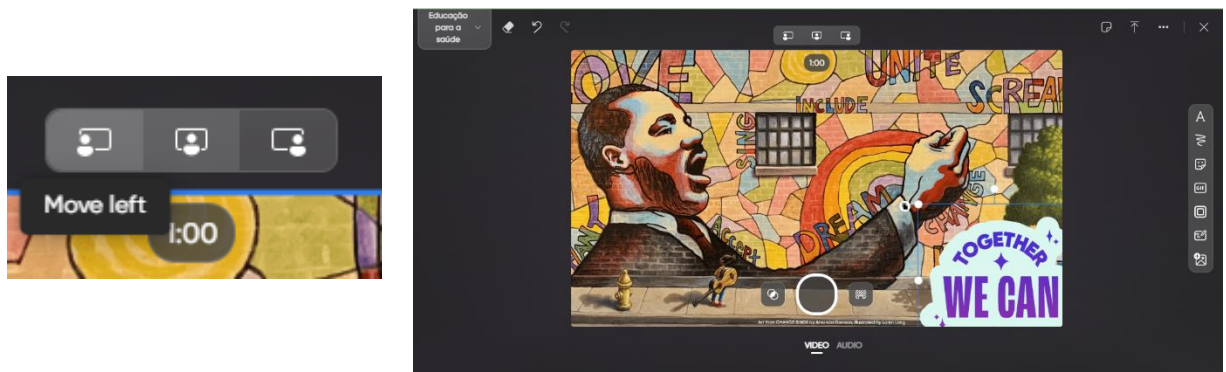

“Use screen as backdrop”

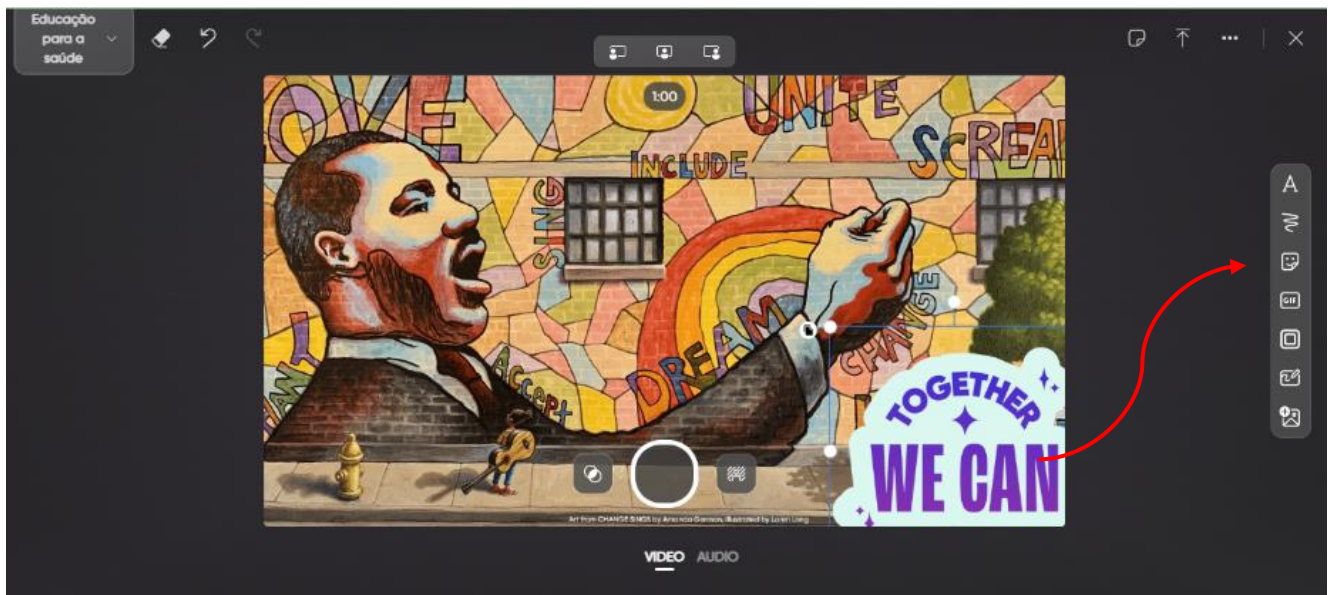

Or “Use background blur as backdrop”

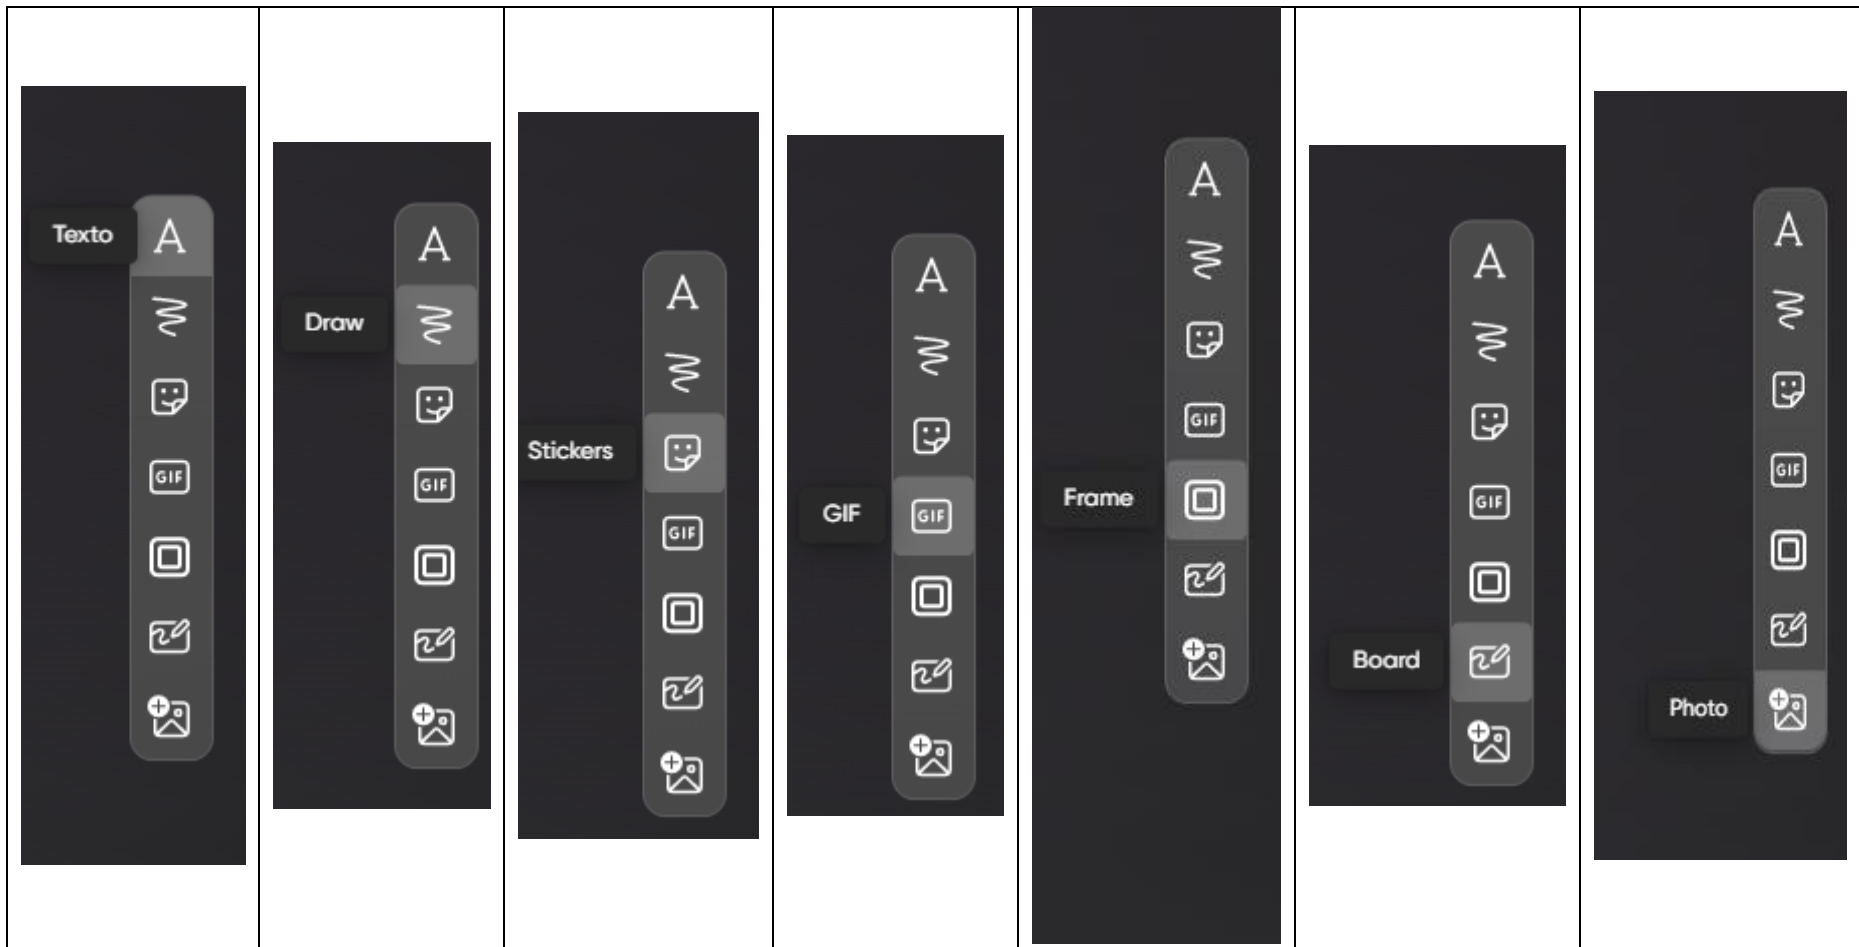

After that, we can choose the speaker's position or simply hide it:

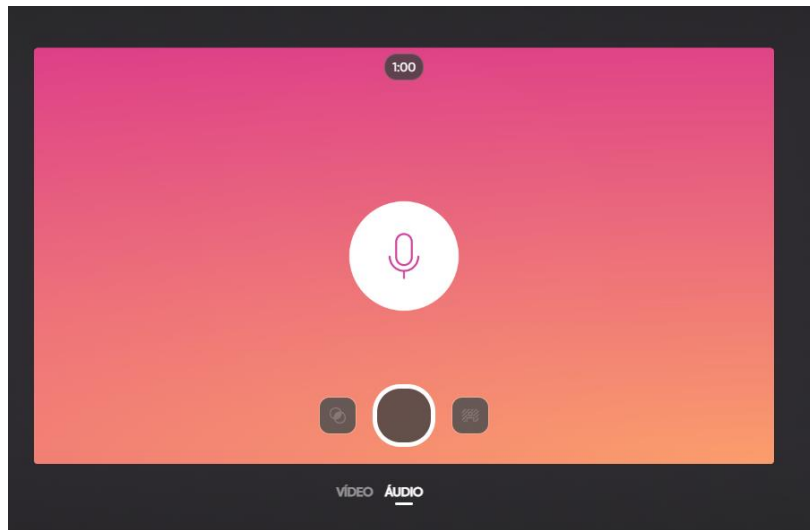

To add elements to our video, we use the tools on the right:

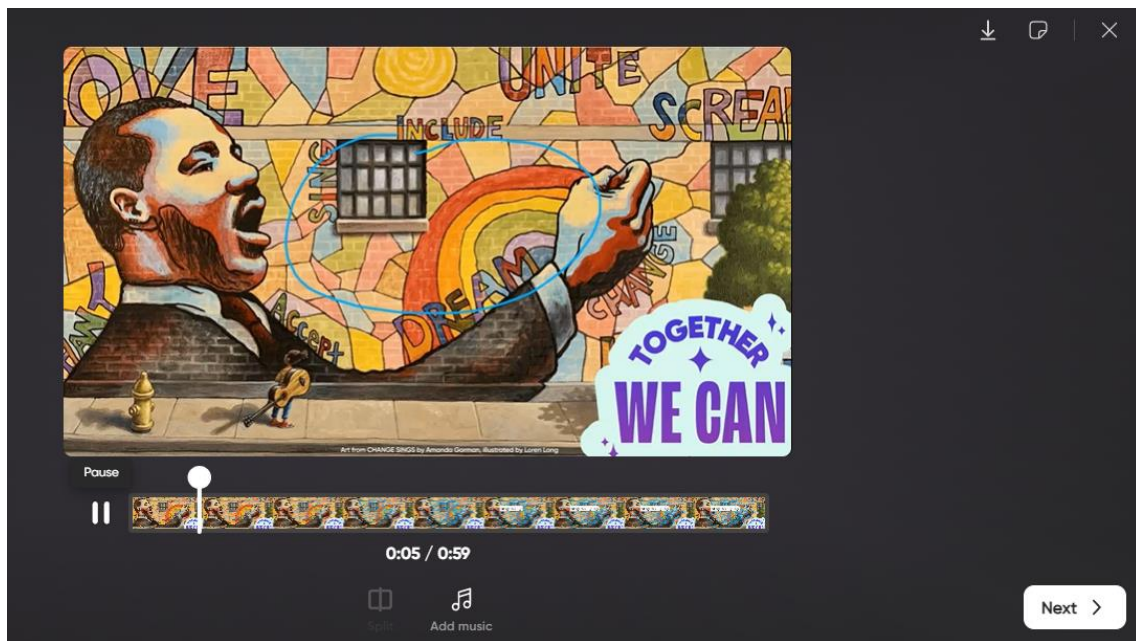

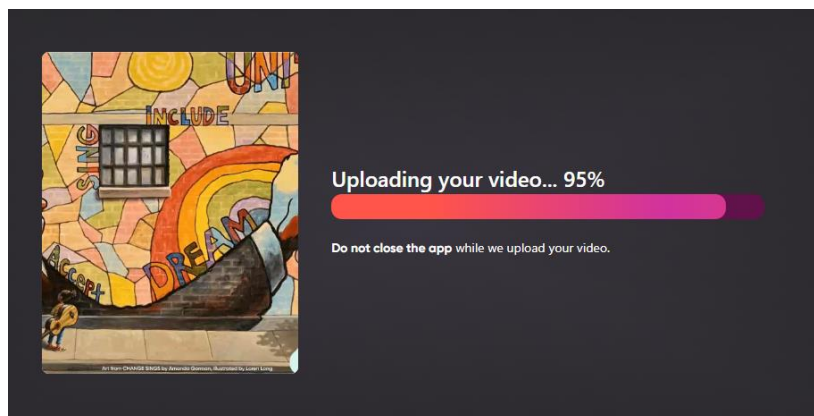

Once the backgrounds and elements are chosen, it's time to record:

We can record an audio and/or add background music

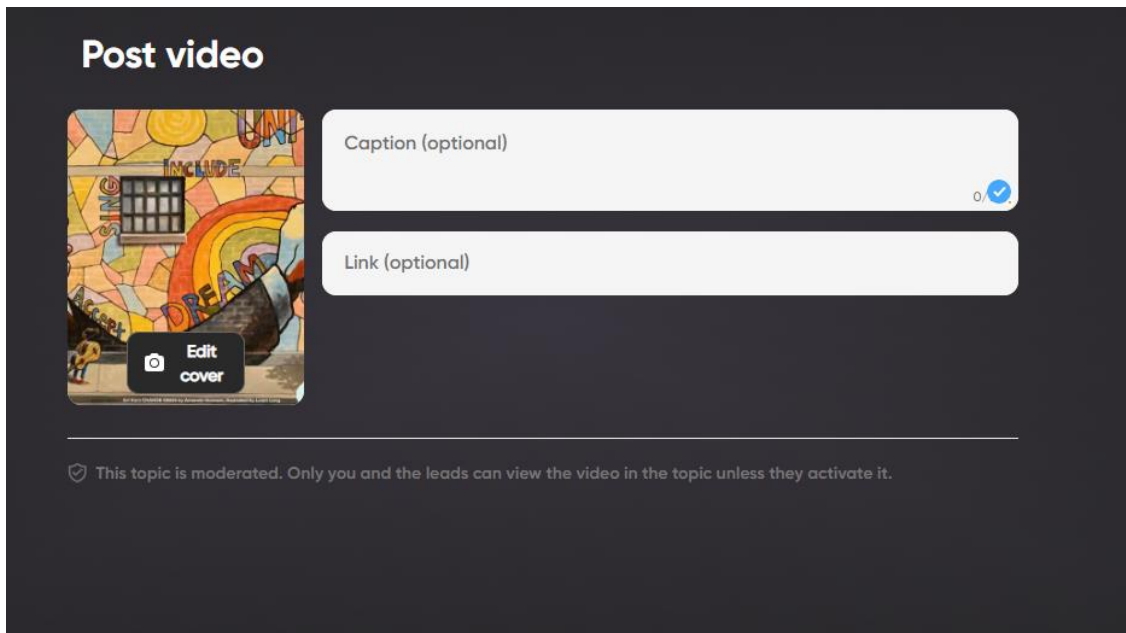

Once the video is finished it's time to test and finalize.

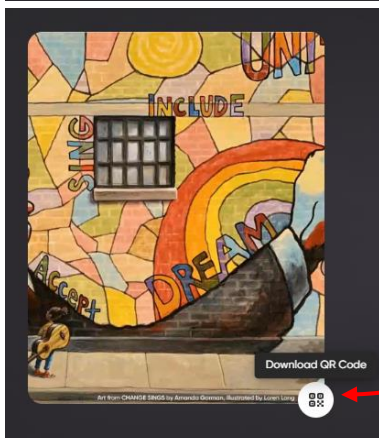

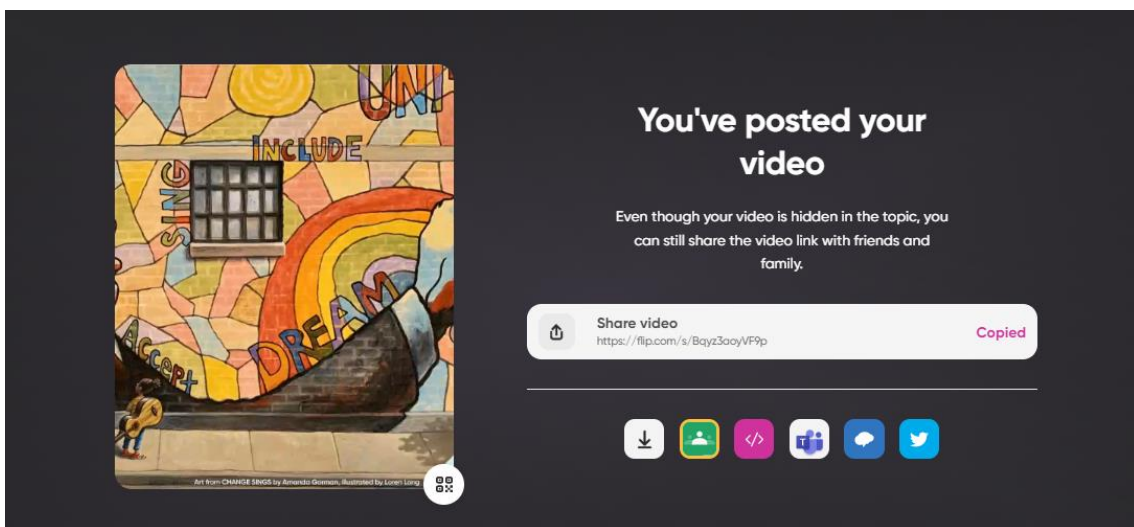

If everything is ok, we should put a short description and optionally create a share link.

In case we observe that something is not right, we can always edit the cover.

We have several ways to share the final project, either to the known LMS platforms, like google classroom, or share the link in another space of our interest.

You can also download the qrcode for sharing.

Once we access this workspace via a group created by the teacher, the teacher automatically accesses the final product.
